

User research survey Team Wision (IE169)

Duration (in seconds)

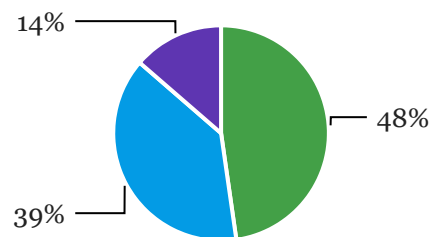

Field	Mean	Responses
Duration (in seconds)	321.58	66

Insight: Mean time to complete our survey = 5.35 minutes

Q13 - Which university/school are you attending? - Selected Choice

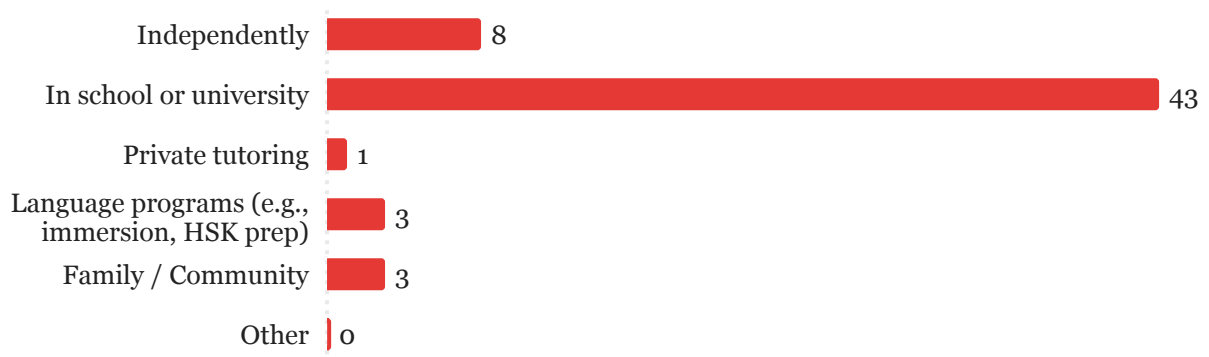

Q2 - What is your Chinese language level?

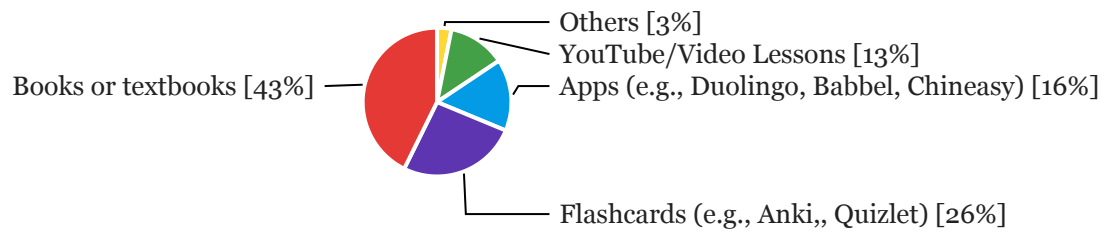

■ Beginner / HSK 1-2 ■ Intermediate / HSK 3-4 ■ Advanced / HSK 5-6

Q3 - How did you learn Chinese? (select all that apply) - Selected Choice

■ Choice Count

Q4 - Which tools or methods do you use most often? (select all that apply) - Selected Choice

Insight: Around 55% of our respondents use some kind of online resources to learn Chinese.

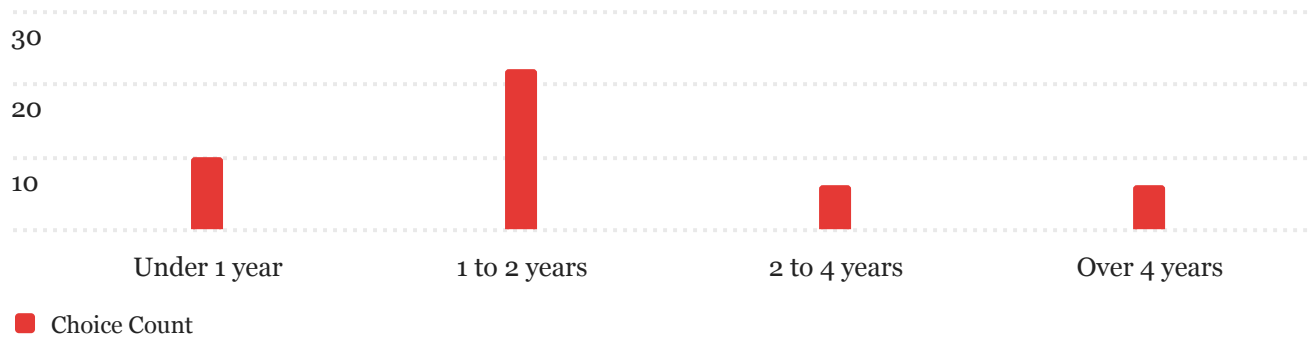

Q4_5_TEXT - Others - Text

pleco

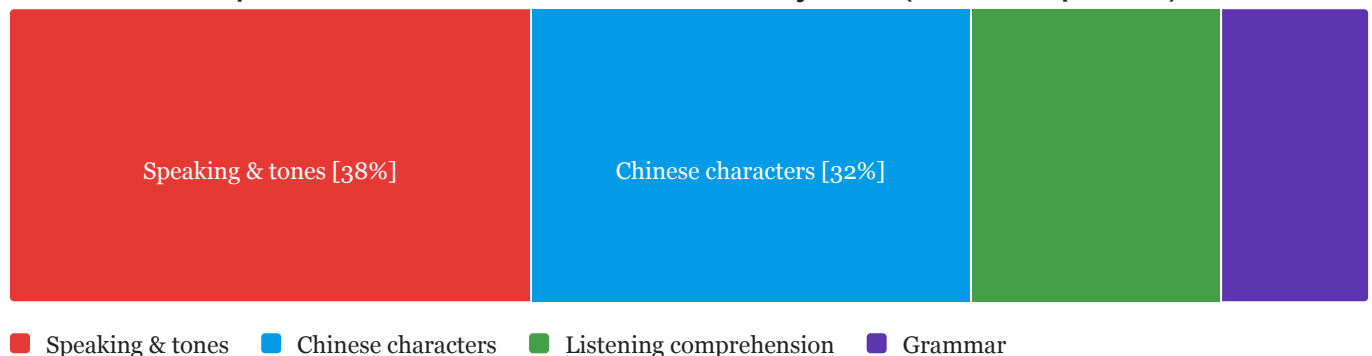

Talking with family and friends

My chinese friends

Q5 - How many years have you been learning Chinese?

Q6 - Which part of Chinese is hardest for you? (select up to 2)

Insight: For Chinese language learners, speaking & tones and characters are equally the most challenging.

Q6.1 - Why do you feel like they are the hardest?

pinyin, characters

It's very hard to start thinking in Chinese and to be able to express what you are saying in correct tones.

So fast, and nuanced

Too many hanzis

I can get confused when characters with different meaning have very similar characters and pinyin, most prominent one is 辛 and 幸

It's different from my native language and I didn't use to speaking with tones

Differentiating betw different tones is difficult

I can't remember which tones go with which words despite not having trouble differentiating their sounds

It's hard to memorize.

just feels like there are too much of it yk, just sheer amount of it makes me tired already

Because tones are very unique to a few specific languages that it's unfamiliar or even unnatural to me

Cant figure out what is the difference between tones

Too many of them

Very complicated and there's so many things to memorize

Distinguishing/making differences in a tonal language at conversational speed

It's a different writing system than I'm used to (the latin alphabet) so it's hard for me to read and write.

Cuz in shanghai, we don't often use Chinese daily

They speak different dialects

Characters look alike

Because of similar sounding of the tones and complexity of the characters

Insight: For characters, they are hard to memorize, hard to distinguish between similar looking characters, and there are too many hanzi.

Q7 - What frustrates you most about your current learning methods?

How could it be different or what could be added?

boring, not easy to remember, currently did not find any fun methods.

I'm too slow in learning. Studying English only took me 2 years. I'm on my second year now for Chinese but my level is still probably A2

Sometimes the unwillingness of native speaker

No clear distinction between hanzis

Limited possibility of speaking especially outside the china

Talking and listening to natives more

Possibly more focus on relevant vocabulary

Some pictures and music.

being consistent would be whole lot better

Learning speed could be quicker

-

The pace of learning is too fast for me at university, more self-study

Reading takes too long

Lack of speaking practice volume with feedback

I would focus more on character recognition. We are asked to memorise characters or learn how to write them, but maybe we should be shown them in context/made to recognise them. We often go out into the world and have the reading skills of a chinese peasant.

It's fine

Speaking and listening

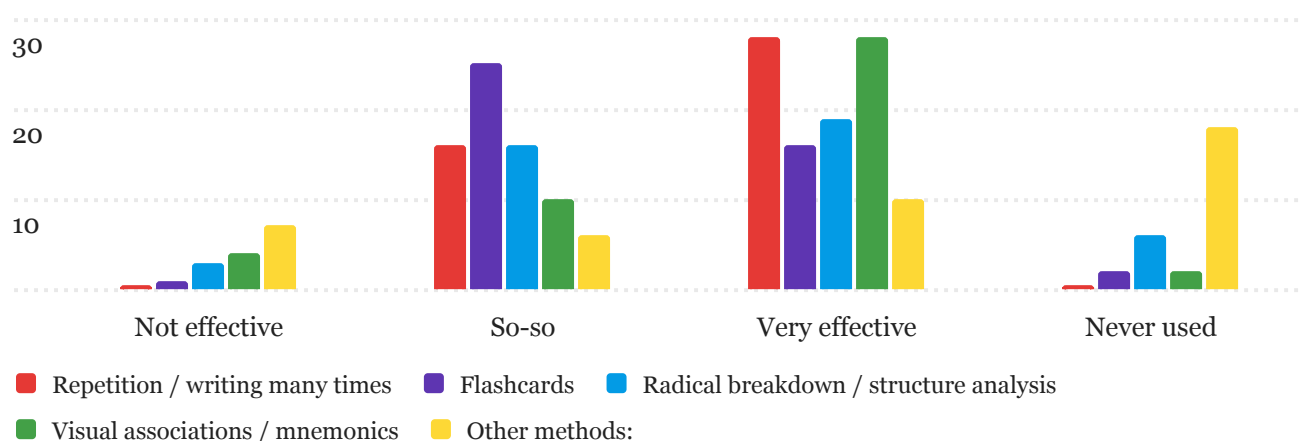

Lack of availability of tools or techniques that make character memorization smoother

I think I just need to practice more. I tend to forget the vocabularies I don't use often in daily life

In school Chinese is taught too formally

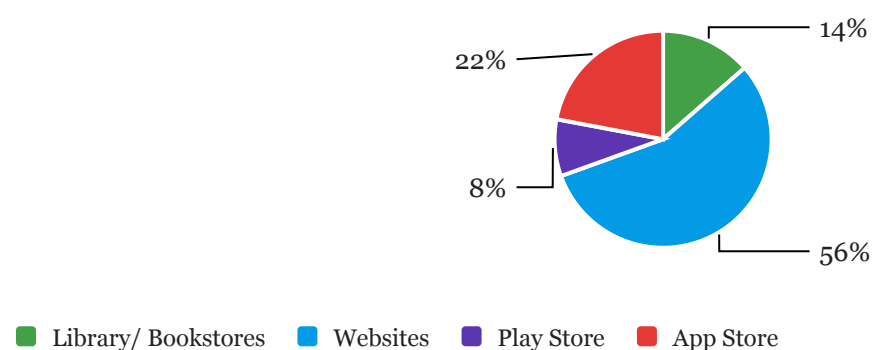

Insight: No fun methods or tools, and practice needed.

Q8 - Please rate the effectiveness of each of these memorization methods.

Insight: Repetition - very effective, Flashcards - so-so, Radical breakdown - effective, Visual associations/mnemonics - very effective

Q9 - Where do you usually find additional resources that help you learn Chinese?

Insight: Learners use websites more than applications, so we can develop a web version.

Q10 - What kind of support would make learning characters easier or more fun for you?

writing writing writing, dictionary eng-chi

Native people willing to speak with you and speaking slowly to you.

Visual comparison, structure breakdown, more conversing

Grammar based learning app instead of random word apps

One of my teachers used to break down the different radicals of new characters and explain what each character means when put together- for example 保留- 保护、留下. I really enjoyed her class because her method was really easy to learn from.

Learning with friends

More flash cards

I'm honestly not sure

Having visual aids and quizzes would help me learn characters more easily and enjoyably.

friends learning together

Reading about the meanings or origins of the character passively while writing it

Visualisation of the characters and understanding why are they looking like this

Idk, just write more and more

More radical deconstruction

Someone I can talk to. I use an AI's(will not say which) voice chat function to practice. The AI corrects me when needed, but sometimes uses words that are too complex. I think a good feature for a language learning app would be such AIs coded to be at the right learning level based on the users capabilities.

Idk

Community

Mnemonics

.

Being paired up with a partner and testing each other

Q11 - Which apps or platforms do you currently use to study Chinese? Why do you use them and what are the drawbacks?

Duolingo, but the section of grammar is not effective.

You Tube Free resources

None

Duolingo

I don't use them for learning purposes but they have significantly helped improve my Chinese- Douyin and Taobao. The biggest drawback is doomscrolling on both, both on Taobao I can learn new words related to items easily that teachers don't really teach, and also size and quality related words. On Douyin I can learn phrases and euphemisms that local Chinese people use which also isn't taught often in a classroom.

Pleco its very useful dictionary

Duolingo- Not so effective as ive been learning for about 450 days now.

Duolingo just to refresh vocabulary. Not useful for learning only memory/refreshing

I use Duolingo, and it's really helpful for my progress.

ChatGPT. Can answer all my questions

Duolingo and Quizlet

None

i use the hsk book mainly, and an AI app

Duolingo

Pleco

Anki for flash cards- drawbacks are cards don't fully transcend the visual component of characters

Duolingo

I usually just use apps where I can watch Chinese dramas to improve my Chinese understanding

Duolingo

Youtube, I can't be consistent for it.

Insights from the short quiz:

Q14 - What was the definition of the character "囧"

Q15 - What was the definition of the character "呆"

Q16 - What was the definition of the character "鲁"

SC0 - Score

Field	Min	Max	Mean	Median	Responses
Score	1.00	3.00	2.82	3.00	38

Insight: The mean score is 2.82, confirming our method is very effective.
