

PROJECT PROCESS BOOK:

FOCUS ZONE BRACELET

MEDIART202 | AY24 S2

Company name and logo:

Vision: To make life easier with design and technology for everyone.

Mission: Our mission is to enhance solve problems and life quality by designing innovative, fashionable and easy-to-use gadgets integrated with technology.

Meaning behind the logo: Synergy between design and technology, the gradient color denotes innovative and interdisciplinary approaches.

BUSINESS MODEL

1. VALUE PROPOSITIONS:

Integration of Fashion and Technology

Our company focuses on the merging of advanced technology with modern, trendy designs to create products that not only look stylish but also offer innovative functionality. Our offerings bridge the gap between usability and aesthetics, appealing to consumers who value both form and function. This approach allows us to reach to a diverse audience, from tech-savvy individuals to fashion enthusiasts, while carving out a unique niche in the tech-fashion industry.

User-Focused Design

At the core of our business is a commitment to user-centric design. We prioritize understanding and addressing the needs, preferences, and challenges of our customers to deliver solutions that enhance their daily lives. We aim to create products that are not only functional but also intuitive, enjoyable, and tailored to their lifestyle. This ensures customer satisfaction and long-term loyalty, aligning with our mission to enrich the lives of those we serve.

Ease of Use and Convenience

We believe that products should make life simpler, not more complicated. Our offerings are designed to be easy to use, requiring less time to learn while delivering maximum utility. Additionally, we focus on convenience by developing solutions that save time, effort, and provide comfort. This includes creating multifunctional devices, integrating them seamlessly into everyday routines, and ensuring they are readily available through multiple sales channels. In doing so, we aim to enhance the overall customer experience while promoting adoption across diverse demographics.

2. KEY ACTIVITIES:

Product Development

Our product development process is driven by creativity, functionality, and sustainability, ensuring that each item offers a unique combination of fashion and utility. We aspire to innovate and create a range of fashionable tech-enhanced products.

Market Research

To stay aligned with consumer needs and preferences, we emphasize the importance of market research and user testing in our business operations. This involves conducting detailed studies to identify trends, understand customer behavior, and gather insights about their pain points and desires. Through iterative testing and customer feedback, we ensure that our products not only meet but exceed user expectations.

Marketing and Brand Building

Our marketing strategy is centered around developing impactful campaigns and building a strong, recognizable brand identity. By leveraging digital platforms, influencer collaborations, and creative storytelling, we aim to connect with our target audience and build lasting relationships.

Retail

To effectively reach global audiences, we adopt a multi-channel retail strategy that includes both online and offline sales platforms. Our e-commerce website serves as a primary channel, offering customers a seamless shopping experience and access to exclusive customization options. At the same time, we establish a presence in physical retail spaces, such as branded stores and partnerships with established retailers, to provide an immersive brand experience.

3. KEY PARTNERS:

- **Material Suppliers:** Reliable sources of raw materials like electronics, materials, and packaging.
- **Technology Providers and Manufacturers:** for hardware and software, and manufacturing.
- **Brand Collaborations:** Strategic partnerships with well-known brands to co-create collections for mutual fame and awareness.
- **Logistics Partners:** Companies specializing in e-commerce and efficient global distribution and supply chain management.
- **Community groups and influencers:** Our target customer base that could be useful for research and advertisements.

4. CUSTOMER RELATIONSHIPS:

Community Engagement

We prioritize building strong and meaningful connections with our customers by fostering a sense of community around our brand. Platforms such as Instagram, TikTok, and forums are used to host challenges, share customer success stories, and highlight user creativity with our products.

Customer Support

We ensure high-quality, responsive service across all channels, whether online or in physical retail spaces.

After-Sale Product Care

Our support teams provide personalized assistance, addressing customer inquiries, troubleshooting technical issues, and guiding them through the purchase journey.

5. CUSTOMER SEGMENTS:

Our primary target audience includes individuals who embrace innovation and **seek products that seamlessly combine functionality and style**. This group appreciates designs that are both modern and intuitive, aligning perfectly with our vision of merging technology with fashion.

Another key segment we cater to includes **fashion-conscious individuals** who desire trendy, high-quality products with a unique and personalized touch. These customers prioritize aesthetics and craftsmanship, often seeking accessories that reflect their personality and enhance their wardrobe.

6. KEY RESOURCES:

Design and Development Team

A core pillar of our company is our highly skilled design and development team, consisting of designers, engineers, and researchers who are passionate about innovation. This team drives the creation of our cutting-edge products, blending fashion with advanced technology to deliver unique, functional, and stylish solutions.

7. CHANNELS:

Online Platform

Our e-commerce platform will serve as the cornerstone of our sales strategy, offering a user-friendly and interactive shopping experience. This platform ensures global accessibility, making our products available to a wide range of customers regardless of location.

Physical Stores

To complement our digital presence, we will establish flagship stores in major cities to provide customers with an immersive brand experience.

Retail Partnerships

In addition to our owned channels, we will collaborate with established retail outlets and multi-brand stores to expand our reach and market presence.

Social Media and Influencers

Social platforms will play a key role in driving brand awareness and engagement. By leveraging targeted social media campaigns and partnerships with influencers, we aim to promote our products to highly engaged audiences.

8. COST STRUCTURE:

- **Research and Development:** Investments in innovation, technology integration, and product testing.
- **Marketing and Branding:** Campaigns, sponsorships, and collaborations to build brand awareness.
- **Manufacturing Costs:** Costs associated with production, materials, and quality assurance.
- **Logistics and Distribution:** Expenses for shipping, warehousing, and managing the supply chain.
- **Customer Support:** Resources for maintaining high-quality customer service.

9. REVENUE STREAMS:

Direct Product Sales

The primary source of revenue will come from selling products through our online platform and physical stores.

Another significant revenue stream will be generated through collaborations and partnerships with major brands and influencers. These initiatives will include co-branded collections, exclusive product lines, and limited-edition releases that leverage the brand equity of our collaborators while showcasing our design and technological expertise.

FIRST PRODUCT ‘FOCUS ZONE BRACELET’

INSPIRATION AND INITIATION

I was diagnosed with ADHD in September this year, but my symptoms of inattention and procrastination have accompanied me since I was in primary school. I feel painful every time I fail to complete a task in time or meet the deadline due to procrastination. What happens most is that I sit down and tell myself that I must complete this study task today, but about 10 minutes later, I will be attracted by doing other things, and then gradually forget what my task is in the process. Or I find that there is still plenty of time to complete this task, so I can't help but do something else, but often because of my misjudgment of time, I miss the deadline. Even some small things in daily life, such as taking out the trash and taking a shower, I can put off doing them for more than three hours. I have tried many ways to change this situation, but almost nothing worked. I long to work and live like a normal person countless times. So Nemka and I established this company to design products that can truly improve the plight of not only ADHD, but also people who have the same struggle of inability to concentrate and procrastination.

OUR DEFINED PROBLEM

What	ADHD (Attention Deficit Hyperactivity Disorder)
Why	Genetic, neurobiological, and environmental factors.
Who	Affects all ages and (5%) of world population.
When	Symptoms generally emerge starting from young age, lifetime consequences
Where	Happens globally

Challenge:

People with ADHD often struggle with distractions, starting tasks, and maintaining focus, making it difficult to complete tasks efficiently.

Point of View:

Emma, a student with ADHD, struggles to keep track of her tasks that are all in her head. She doesn't know where to start, not forget about anything and how to get back on track, leaving her overwhelmed.

How Might We:

- 1.How can we create a **tool** for people with ADHD to focus more and get more things done?
- 2.How might we design **tools** that reduce external distractions and help users stay on track without feeling overwhelmed?
- 3.How might we create **systems** that allow users to **track their progress** visually, offering a clear sense of achievement for each small milestone they reach?

5 WHY:

Problem we are focusing on: **Hard to organize tasks for ADHD people**

Why? They lose focus and forget about their to-do list

Why? It's inconvenient to constantly check on an app or big notebook.

Why? They create distraction and ADHD people benefit from tangible and sensory cues to anchor their attention.

Why? Stuff that can always be alongside with the ADHD people can remind them of the task each time they see it thus motivate and urge them to work on the tasks.

Why? It's hard to arrange everything clearly without a proper tool or method for visualizing.

PERSONA ANALYSIS

INTERVIEWS

Prepared questions

1. Background Information: Age, occupation, gender, age of diagnosis, testing method, nationality, children, etc.
2. App Experience: Have you used productivity apps before? Which was the most effective? Why was it not effective?
3. Symptom Management: How do you cope with ADHD symptoms? Which sensory input (hearing, touching, tasting, smelling, seeing) makes you feel better?
4. Challenges and Expectations: What do you find most challenging about ADHD? What are your expectations for a productivity app?
5. Daily Habits: How difficult is it for you to start the day, begin work, avoid your phone, and plan your schedule? (Rate 1-5)

Results analysis

Our team interviewed 7 respondents who were diagnosed with ADHD, ranging in age from teenagers to 40 years old, with 2 males and 5 females. The common problem among them is that they all have serious difficulty in starting a task, and they all tend to put off doing something. Two of the interviewees also said they often had difficulty controlling their emotions.

PERSONA ANALYSIS

DEMOGRAPHICS	• Age: 19 • Female • Student at DKU from Class of 2027 • Mongolian • No kids • First diagnosed at 19 years old and had symptoms since birth (official)	• Age: 21 • Female • Student at DKU from Class of 2025 • Chinese • No kids • First diagnosed at 21 years old and had symptoms since birth (official)
SYMPTOMS	• Forgetful (including eating and sleeping) • Sensitive to environment • Inattentive • Anxiety (developed because of ADHD) • Easily overwhelmed	• Little bit forgetful • Hard to control emotions • Inattentive • Anxiety
CHALLENGES	• Deadlines pile up • Cannot start working/studying • Hard to sleep • Feels pressure if cannot finish tasks • Burnt out after planning • Physically uncomfortable when restricted	• Deadlines pile up • Hard to start a task • Feels pressure if cannot finish a task • Hard to break down tasks • Burn out after planning
NEEDS	• Less distractions • Need to break down tasks • Need to have external motivation and pressure • Need somebody to track them	• Need to break down tasks • Need Reminders • Need supervision from other people

AWFUL DAY FOR A STUDENT WITH ADHD

USER JOURNEY MAP -- MS. LIN

	AWARENESS	CONSIDERATION	IMPLEMENTATION	OBSTACLE	COMPROMISE
CUSTOMER ACTIONS	Decide to change her habit of putting off doing works	• Search effective methods online • Make a to-do-list	Try to use to-do-list to motivate herself Pressure increases and hard to focus	Refuse to make a to-do-list because she always can't finish tasks on it	Go to the library to study, but she has trouble persuading herself to the library.
CUSTOMER EXPERIENCE					
PAIN POINTS	• Plentiful but useless methods on the Internet • A to-do-list alone is not powerful enough		• Facing several different tasks, user's mental condition gets worse due to the pressure • Inattention		• Lack of motivation
NEEDS	• A method/product that has a combined function		• A health condition monitor • A timer to help focus		• Offer a rewarding system

This User Journey Map depicts Ms. Lin's experience in addressing her procrastination habit. The journey begins with her realization that she needs to change. She searches for solutions online, hoping that creating a to-do list will help. Initially, she feels hopeful, but the sheer number of ineffective methods and the inadequacy of to-do lists alone leave her feeling overwhelmed and dissatisfied.

As she moves into implementation, she struggles to use her to-do list effectively. The mounting pressure from multiple tasks and her difficulty focusing exacerbate her mental stress, leaving her frustrated. Eventually, she stops using the to-do list altogether, as the repeated inability to complete tasks makes her feel disheartened and unwilling to try again.

In an effort to find a compromise, Ms. Lin decides to study at the library, thinking a change in environment might help. However, she struggles to motivate herself to go, which leaves her feeling stuck once again. Throughout her journey, she grapples with a lack of effective tools, mounting mental pressure, and low motivation. Her needs evolve into wanting a method that integrates functions like focus timers, health monitoring, and a reward system to help her stay on track.

MARKET RESEARCH

EXISTING PRODUCTS

Visualized the tasks list, takes off one bracelet at a time

Fidget toys
/Mostly for anxiety/

Smart watch reminders

Physical pomodoro timer

To-do list app

Sticky notes

ADHD chair

Productivity apps

Location tag

WHAT'S LACKING IN EXISTING PRODUCTS

- Visually unattractive
- Too much distraction/ too much functions
- Need to be carried around as a separate tool
- Apps and websites are too distracting
- No dedicated multi function gadget

PUBLIC'S COMMENTS

"The only advantage a Smart Watch has over your typical fitness tracker is that it has functionality like ECG, Blood Oxygen sensors, Temperature sensors etc." (Reddit user)

After reading the same book (Digital minimalism) I came to the same conclusions and replaced my smart watch with an analog watch. I like being able to check the time and it looks cute with my outfits. (Reddit user)

The Pomodoro Technique utilizes fixed time intervals for focused work, usually 25 minutes, followed by short breaks. This structured approach keeps the mind alert and engaged, significantly reducing the inclination to procrastinate and enabling a deeper focus on tasks. (From Pomodoro Technique's website)

Planners are not working for me, I buy them, start them, but eventually forget just all about them ! I had an Apple Watch at my former job and it was amazing all it could remind me : lunch time, meeting, it was set to call my bf when my heart rate was too high ... that's why I switched from Huawei to iPhone. (Reddit user)

For me, it's the timer on my watch that is a life changer. Helps immensely with procrastination and time blindness. (Reddit user)

A wallet case for my phone, that way i never forget my drivers license or debit card at home. (Reddit user)

PRODUCT ADVERTISEMENT VIDEO

UNIQUE SELLING POINT

- Promoting digital minimalism
- Visual aid
- Less distraction
- Less likely to forget
- Positive impact on user’s both physical and mental health and productivity
- Customizable

****Digital minimalism** is a way to engage with consumer technology that prioritizes focused, intentional use of technology to limit distraction.

PRODUCT OVERVIEW

- FEATURES:**
- Movable beads representing tasks
 - Congratulates when you slide the bead
 - Special badges on the screen for streaks
 - Movement sensor will remind you to move if they stay still for a long-time
 - Pomodoro timer /no need to use phone/
 - Stress-relieving toys
 - Heart-rate monitor will remind you to breathe when they’re anxious or feeling overwhelmed
 - Freedom to put to-do list anywhere you often see

OUR TARGET

Who: For people aged 15-25

These people have some responsibilities such as homework and work and actively uses technologies and familiar with them. They support digital minimalism and likes to have fashionable technology products.

Where: Globally

We can use online retailing websites and social media platforms to reach international audiences.

USER EXPERIENCE - THE CUSTOMER JOURNEY

Via our commercial video, people can learn about our product in the first step and later engage in one-on-one conversations with customer service representatives in our upcoming official online store to gain deeper insights and make purchases.

During the product trial phase, invited users provided feedback after the trial period, indicating that wearing our product has increased awareness of their health issues. They found it easier to receive reminders when feeling overly anxious or sitting for extended periods, prompting them to adjust their state consciously and alleviate issues like difficulty concentrating caused by anxiety.

Additionally, writing tasks on notes helps users visualize their tasks and serves as a real-time reminder. The built-in timer improves their sense of time management, and even when they lose focus, the timer's alert helps redirect their attention back to the task at hand.

The mechanism of moving beads on the bracelet to represent completed tasks is an effective reward system. The tactile sensation of moving the beads and visually seeing them shift from one side to the other provides a tangible sense of accomplishment, further motivating them to complete their tasks.

Moreover, the bracelet's wearability makes the entire setup lightweight and convenient, ensuring it does not add any unnecessary burden to daily life.

DEVICE COMPONENTS

FURTHER PLANS

SPECIAL EDITIONS

TECHNICAL ADVANCEMENT

Scalability and Cost-Effectiveness

- **Economies of Scale:** By sourcing raw materials in bulk, we can significantly reduce per-unit costs as production scales up. The materials required for our products are carefully selected to balance affordability with durability and aesthetic appeal, enabling us to maintain high profit margins while delivering value to our customers.
- **Mass Production Partnerships:** We plan to collaborate with established mass production companies for the technological components of our products. These partnerships will allow us to streamline manufacturing processes, reduce overhead costs, and meet increasing market demand as the business expands.

Expansion Strategies

- **Collaborations with Major Brands:** These partnerships will not only expand our product offerings but also introduce us to new customer segments, increasing brand visibility and market penetration. Their motivation will be awareness and brand image through our campaigns, contributing to problem solving.
- **Inclusive Design:** As part of our commitment to inclusivity, we will develop kid-friendly and elderly-friendly designs and functionalities. These products will cater to the specific needs of these demographics, such as adjustable sizes, simpler interfaces, and tailored aesthetics, broadening our appeal to diverse customer bases.
- **Diversification of Product Lines:** Beyond bracelets, we will explore the development of other tech-fashion products that currently lack strong design elements or integrate fashionable designs into underutilized tech products. This approach will enable us to capture untapped market opportunities and establish ourselves as a leader in tech-driven fashion innovation.

MILESTONES AND THE TIMELINE

1

Phase 1: Product Development and Testing (Months 1-4)

- Collaborate with the design and engineering teams to finalize the bracelet's production-ready model.
- Perform rigorous testing to ensure the product is durable, reliable, and easy to use.
- Incorporate user feedback from focus groups and beta testers to optimize features and usability and make improvements.

2

Phase 2: Brand Development and Pre-Launch Campaign (Months 4-7)

- Build a strong marketing strategy to generate buzz around the bracelet.
- Launch a social media campaign featuring teasers, behind-the-scenes content, and influencer partnerships to attract early interest.
- Prepare the online platform and flagship store for pre-orders and showcase the product through interactive previews.

3

Phase 3: Product Launch (Month 8)

- Officially launch the bracelet on both online platforms and in physical flagship stores.
- Host a launch event or pop-up experience in key cities to showcase the bracelet and engage with customers directly.
- Begin delivering pre-orders and ensure robust customer support for the initial wave of buyers.

4

Phase 4: Post-Launch Evaluation and Expansion (Months 9-12)

- Gather customer feedback to assess the product's reception and identify areas for improvement.
- Expand sales channels by pursuing retail partnerships and exploring collaborations for limited-edition versions of the bracelet.
- Use insights from the bracelet launch to guide the development of future tech-fashion products.
- Start working on the different editions collaborating with other organizations
- Start planning the next product

Product Design Process

1. Problem identification (week #2)

2. Interviews and background research (week #3).

Our team interviewed 7 respondents who were diagnosed with ADHD, ranging in age from teenagers to 40 years old, with 2 males and 5 females. Xinyan interviewed 3, Nemuulen interviewed 3 and Chao interviewed one participant, all of whom are officially diagnosed with ADHD.

For the privacy concerns we only had online notes without audio or video recordings.

We analyzed all of them by making bullet pointed lists and chose two of the participants who was grouped as our target customer group.

3. Ideation and development (week #3&4)

1. Productivity APP (+ STREAKS can motivate people, **not** if they're distracted, rewarding system, reminder and to-do list)
2. Or it could be an app to be your friend (with AI voice assistant, and it only asks questions and encourages the user)
3. AI toy like **Eliik**, digital pet, propose an integration to this existing product
4. Paper and pen wearable /exists/
5. Soundwave modifier – could be like air pods or headphones, specifically designed for adhd, integrate offline music (brown noise)
6. Self-breathing device for less anxiety, bracelet(inflate deflate)- include fidget toys, perfume, bracelet can send data to the phone application
7. 5 second alarm – reminder app that counts down from 5 to 0 when the time is up
8. ADHD water bottle – with note taking space and fidgets
9. Mood-based task allocation app: user will input their tasks and categorize using tags, then the user will input their moods, and it will give them tasks according to the mood. Feeling low energy-> easier task, More energy/motivated-> Harder tasks
10. Pomodoro timer with eyes, could have more functions, such as task list at the bottom and fidgets to not forget this toy
11. Wear a small wristband that vibrates lightly when it detects you're not moving (or moving too much)
12. An app that gives reminders based on location, time, and even sensory factors.
13. Visually helping them to finish tasks, if not doing tasks for a long time, then the character on app will feel bad – the digital character will symbolize them - Finch exists
14. We can redesign a notebook (hanging notebook from bags)
15. Anything that could improve their reading experience- focus **more** ??? (This idea is not ready)
16. Maybe can focus on forgetting to drink water/have medicine => more for general health and for Alzheimer too – **water bottle that vibrates if not moved for 30 minutes**. (Very much possible haha)
17. An extension that only highlights one sentence at a time to improve focus on the reading
18. Caretaker **wechat** account that sends personalized and set reminders like mom or loved one to a user such as "Did u drink water? It's important for your health, u know it."
19. Pomodoro or timer necklace, that also clicks
20. ADHD cafe that gives out paper cups with checklists on them.
21. To-do-list sticker printer integrated with pet-like robot

List of ideas on a shared document

Team meeting notes and idea development on the board

As part of our ideation process, we generated 21 original ideas to address our defined problem, ensuring a broad spectrum of solutions. To determine the most viable and impactful idea, we utilized the Now, How, Wow Matrix, a proven framework for evaluating ideas based on feasibility and originality. Here's how it works and how we applied it:

The Now, How, Wow Matrix is a decision-making tool used to categorize and prioritize ideas based on two key criteria:

1. **Ease:** How easy or practical it is to implement the idea with current resources and technology.
2. **Originality:** How innovative or unique the idea is in the context of the market or industry.

IDEATION /Ideas categorized by Now, How, Wow matrix/

3.Prototyping and Testing (#week4-7)

We mainly ordered the materials from Chinese online platforms and Nemuulen ordered technical materials while Xinyan ordered main parts of the bracelet like beads, wires and cardholder.

Prototyping Process

The prototyping stage, led by Nemuulen. For the initial prototype, measurement inaccuracies prevented the bead and wires from connecting. To address this, we used four strands of plastic wire to increase thickness, ensuring the beads stayed in place. While this adjustment solved the immediate issue, the solution was not aesthetically pleasing. In the next iteration, we used three strands of braided wire, which not only improved the appearance but also enhanced the bracelet’s elasticity, making it adaptable to various wrist sizes. This version demonstrated a cleaner, more attractive design, aligning with the product’s focus on style and functionality. Initially we integrated a small M7 smartwatch for the bracelet’s technological features. However, it was discovered that the device could not be reprogrammed to suit our needs. As a result, we pivoted to an ESP32 smartwatch, which is compatible with both Python and Arduino. It was easy to use and had a variety of sensors for advanced functionality. However, it lacked a built-in power supply, making it impractical for showcasing the prototype without charging. To address the immediate need for a functional prototype, we adapted the original smartwatch with a revised UI (User Interface). Although limited in its programmability, this device was sufficient for demonstration purposes, as it included a heart rate monitor and a movement monitor, two core features of the final product.

First protoype:

Final prototype:

Cardholder and the notes made for the video:

Custom UI design installment

Video shooting process:

Following is the attachment that includes our literature review, which was done by Xinyan Lin and Hanyue Deng.

BACKGROUND RESEARCH

Study 1 - Adult ADHD Diagnosis & Treatment

- Key Insight: Adult ADHD is underdiagnosed, impacting life quality and work.
- Findings:
 - Combined treatment (medication + therapy) improves focus and time management.
 - Support: Untreated ADHD linked to anxiety, depression, and lower social function (Kooij et al., 2010).

Study 2 - Neurobiology of ADHD

- Key Insight: Brain structure abnormalities drive ADHD symptoms.
- Findings:
 - Delayed prefrontal cortex development affects attention and impulse control.
 - Basal ganglia and cerebellum dysfunction relate to hyperactivity.
 - Support: Low dopamine receptor levels disrupt focus, guiding treatment (Volkow et al., 2009).

Study 3 -Impact of Environmental Colors on ADHD Attention

- Key Insight: Cool colors improve focus and reduce anxiety in ADHD patients.
- Study Details:
 - Source: Journal of Attention Disorders (2022).
 - Tested cool colors (blue, green) vs. warm colors (red, orange).
 - Results: Blue walls and green furniture showed highest focus scores.
 - Recommendation: Use cool-toned color schemes in ADHD-friendly spaces to support concentration.
- Supporting Research: Küller et al. (2009) - Cool tones lower heart rate and blood pressure, promoting calm and focus.

Literature Review -- A Guide to the Treatment of Adults with ADHD

1.Prevalence and Continuation

ADHD persists into adulthood for about 50% of individuals diagnosed in childhood, with an estimated 4.7% prevalence among adults. Although symptoms may change with age, adult ADHD remains a common and impactful condition

2. Mitigating the symptoms

Compared to children, adults tend to develop coping strategies that can mitigate or mask symptoms but often still struggle with issues like time management and organization.

3. Treatment Approaches

- Medication
- Environmental Restructuring -- modifying the patient's environment/using organizational tools
- Psychotherapy -- cognitive-behavioral therapy/supportive and educational therapy

4. Long-term Support

Continuous support, such as booster sessions and long-term psychoeducation, can help sustain progress. Family involvement and support groups are recommended to address social and familial impacts of ADHD

Weiss, M. D., & Weiss, J. R. (2004). A guide to the treatment of adults with ADHD. *Journal of Clinical Psychiatry*, 65, 27-37.

Literature Review -- ADHD with Dopamine Deficiency

The dopamine theory of ADHD claims that inadequate dopamine decreases motivation and focus and affects learning and memory. It also reduces the reward that people with ADHD experience from completing tasks.

Can increasing dopamine levels help ADHD?

The medications that treat ADHD also tend to increase dopamine levels in the brain. They do this by blocking dopamine reuptake, allowing more of the chemical to stay in neurons.

Amphetamines, a type of stimulant many people take to treat ADHD, also release Trusted Source dopamine.

This suggests that increasing dopamine levels in the brain — or improving the access that neurons have to dopamine — can reduce ADHD symptoms.

Villines, Z. (2023, June 28). *How to increase dopamine with ADHD*. MedicalNewsToday. <https://www.medicalnewstoday.com/articles/how-to-increase-dopamine-adhd>

BACKGROUND RESEARCH

Literature Review — The necessity of supervision for ADHDer

“Give appropriate supervision to ADHD students.

Children with ADHD require more supervision than their peers because of their delayed maturity, forgetfulness, distractibility, and disorganization. Help these students by pairing them with classmates who can remind them of homework and classwork, using student partners to team up on a project, and involving classroom aides as much as you can during and after class.”

— **From ADDitude**

Deny, C. (2024, October 14). *Teaching Strategies for Students with ADHD: Ideas to Help Every Child Shine*. ADDitude. <https://www.additudemag.com/teaching-strategies-for-students-with-adhd/>

“From a young age, we have been working on the idea that it is my son's responsibility to train himself to create a micro-environment in the classroom and at his future workplace that will allow him to be effective. However, the nature of ADD/ADHD often leads to a momentary breakdown of these self-disciplines, and [having a supportive supervisor would pay dividends in contribution and creativity.](#)”

— **Quora**

Anonymous. *How should someone supervise a person with ADD/ADHD*. Quora. <https://www.quora.com/How-should-someone-supervise-a-person-with-ADD-ADHD>

Literature Review — Visualize the task for ADHDer

“Provide visual reminders.

Students with ADHD respond well to visual cues and examples. For instance, demonstrate a skill like essay writing on an overhead projector or on the board. When children get to their independent work, leave key points about a topic visible on the board. Post important concepts the children will use again and again on brightly colored poster board around the room.”

— **From ADDitude**

Deny, C. (2024, October 14). *Teaching Strategies for Students with ADHD: Ideas to Help Every Child Shine*. ADDitude. <https://www.additudemag.com/teaching-strategies-for-students-with-adhd/>

Literature Review — Music targeted for ADHD group

How music helps ADHD?

Many people with ADHD typically have dopamine deficits. That means they need dopamine to get work done. Music can provide that much-needed hit of dopamine so they can focus their attention and get things done.

It has also been found that keeping a stable rhythm and musical beat can be calming. This helps with a sense of security and stability that can lead to emotional well-being and regulation of stress hormones—something people with ADHD may have a hard time doing.⁷

What's the type of music?

- Binaural Beats
- Rock Music
- Classical music
- Lo-Fi

Blanchifield, T. (2024, August 21). *Music for ADHD: Benefits & Types to Improve Focus*. verywellmind. <https://www.verywellmind.com/music-to-improve-focus-adhd-6361057>

Reviews from the audience after watching the video

Dong XX

As someone with ADHD, this product speaks to me on so many levels. I love how it helps with task completion in such a simple, rewarding way.

Jackie X

I love how it combines fashion with function. The bead reward system is genius—I need this in my life. And one suggestion for the video itself, I like the texts, but I think u could make it a little shorter and brighter with bigger texts.

Annie X

I've been looking for something to keep me on track without feeling too clinical. This is exactly what I needed! Yet, I also think you can expand the targeted group, not only for the ADHDer, but also for other people who have difficulty concentrating and finishing works in time.

Zheng XX

This seems like a perfect tool for people focus issues, and I loved the creative compelling parts in the video which appeal to people to buy the bracelet. One thing I'd suggest is showing more scenarios—like how it helps during a workout or study session—to highlight its versatility.

Improvement

- Changed the opening address in the video from “ADHDer” to the more general and intimate “you”.
- Changed the original blue text to a brighter, more eye-catching yellow, and increase the font size .
- Added some scenes of studying and working in the video, incorporating the use of the bracelet, to make it easier for the audience to understand how the bracelet works.
- Added the studio logo in the credits at the end of the video to create a strong brand impression for the audience.

VISUALIZATION

Commercial Videos

- Post the videos on **social media**, such as Xiaohongshu, Weibo, Instagram, Facebook, and etc., to reach a wide audience, increase brand awareness, and engage directly with potential customers since these platforms could boost the content to the target audience by algorithms.
- Send out an **email** blast to our subscribers and includes the video in it, engaging with an existing audience and keep potential customers informed.
- Alongside this video, we will request famous **influencers** such as tech gadget reviewers or fashion influencers to share and test our products on their social media accounts.

Posters

- Have a poster display in dormitories, class buildings and the cafeteria to maximize exposure in areas where high school or university students spend time daily. And also collaborate with the school social media to advertise through the campus website, newsletters, or student papers.
- Contact professional advertising agencies to display the poster in places, such as bus stop billboards, metro station light-boxes. Cafes can also be an ideal places because young people, our targeted users, tend to go there.

Phrases that could be used for campaigns:

1. "Where Technology Meets Trend – Redefine Your Accessories!"
2. "Personalized. Functional. Stylish. Accessories Made for You."
3. "Fashion-Forward Tech: Work Smarter, Look Better!"
