The future of first aid.

What problems do we encounter when we call emergency numbers?

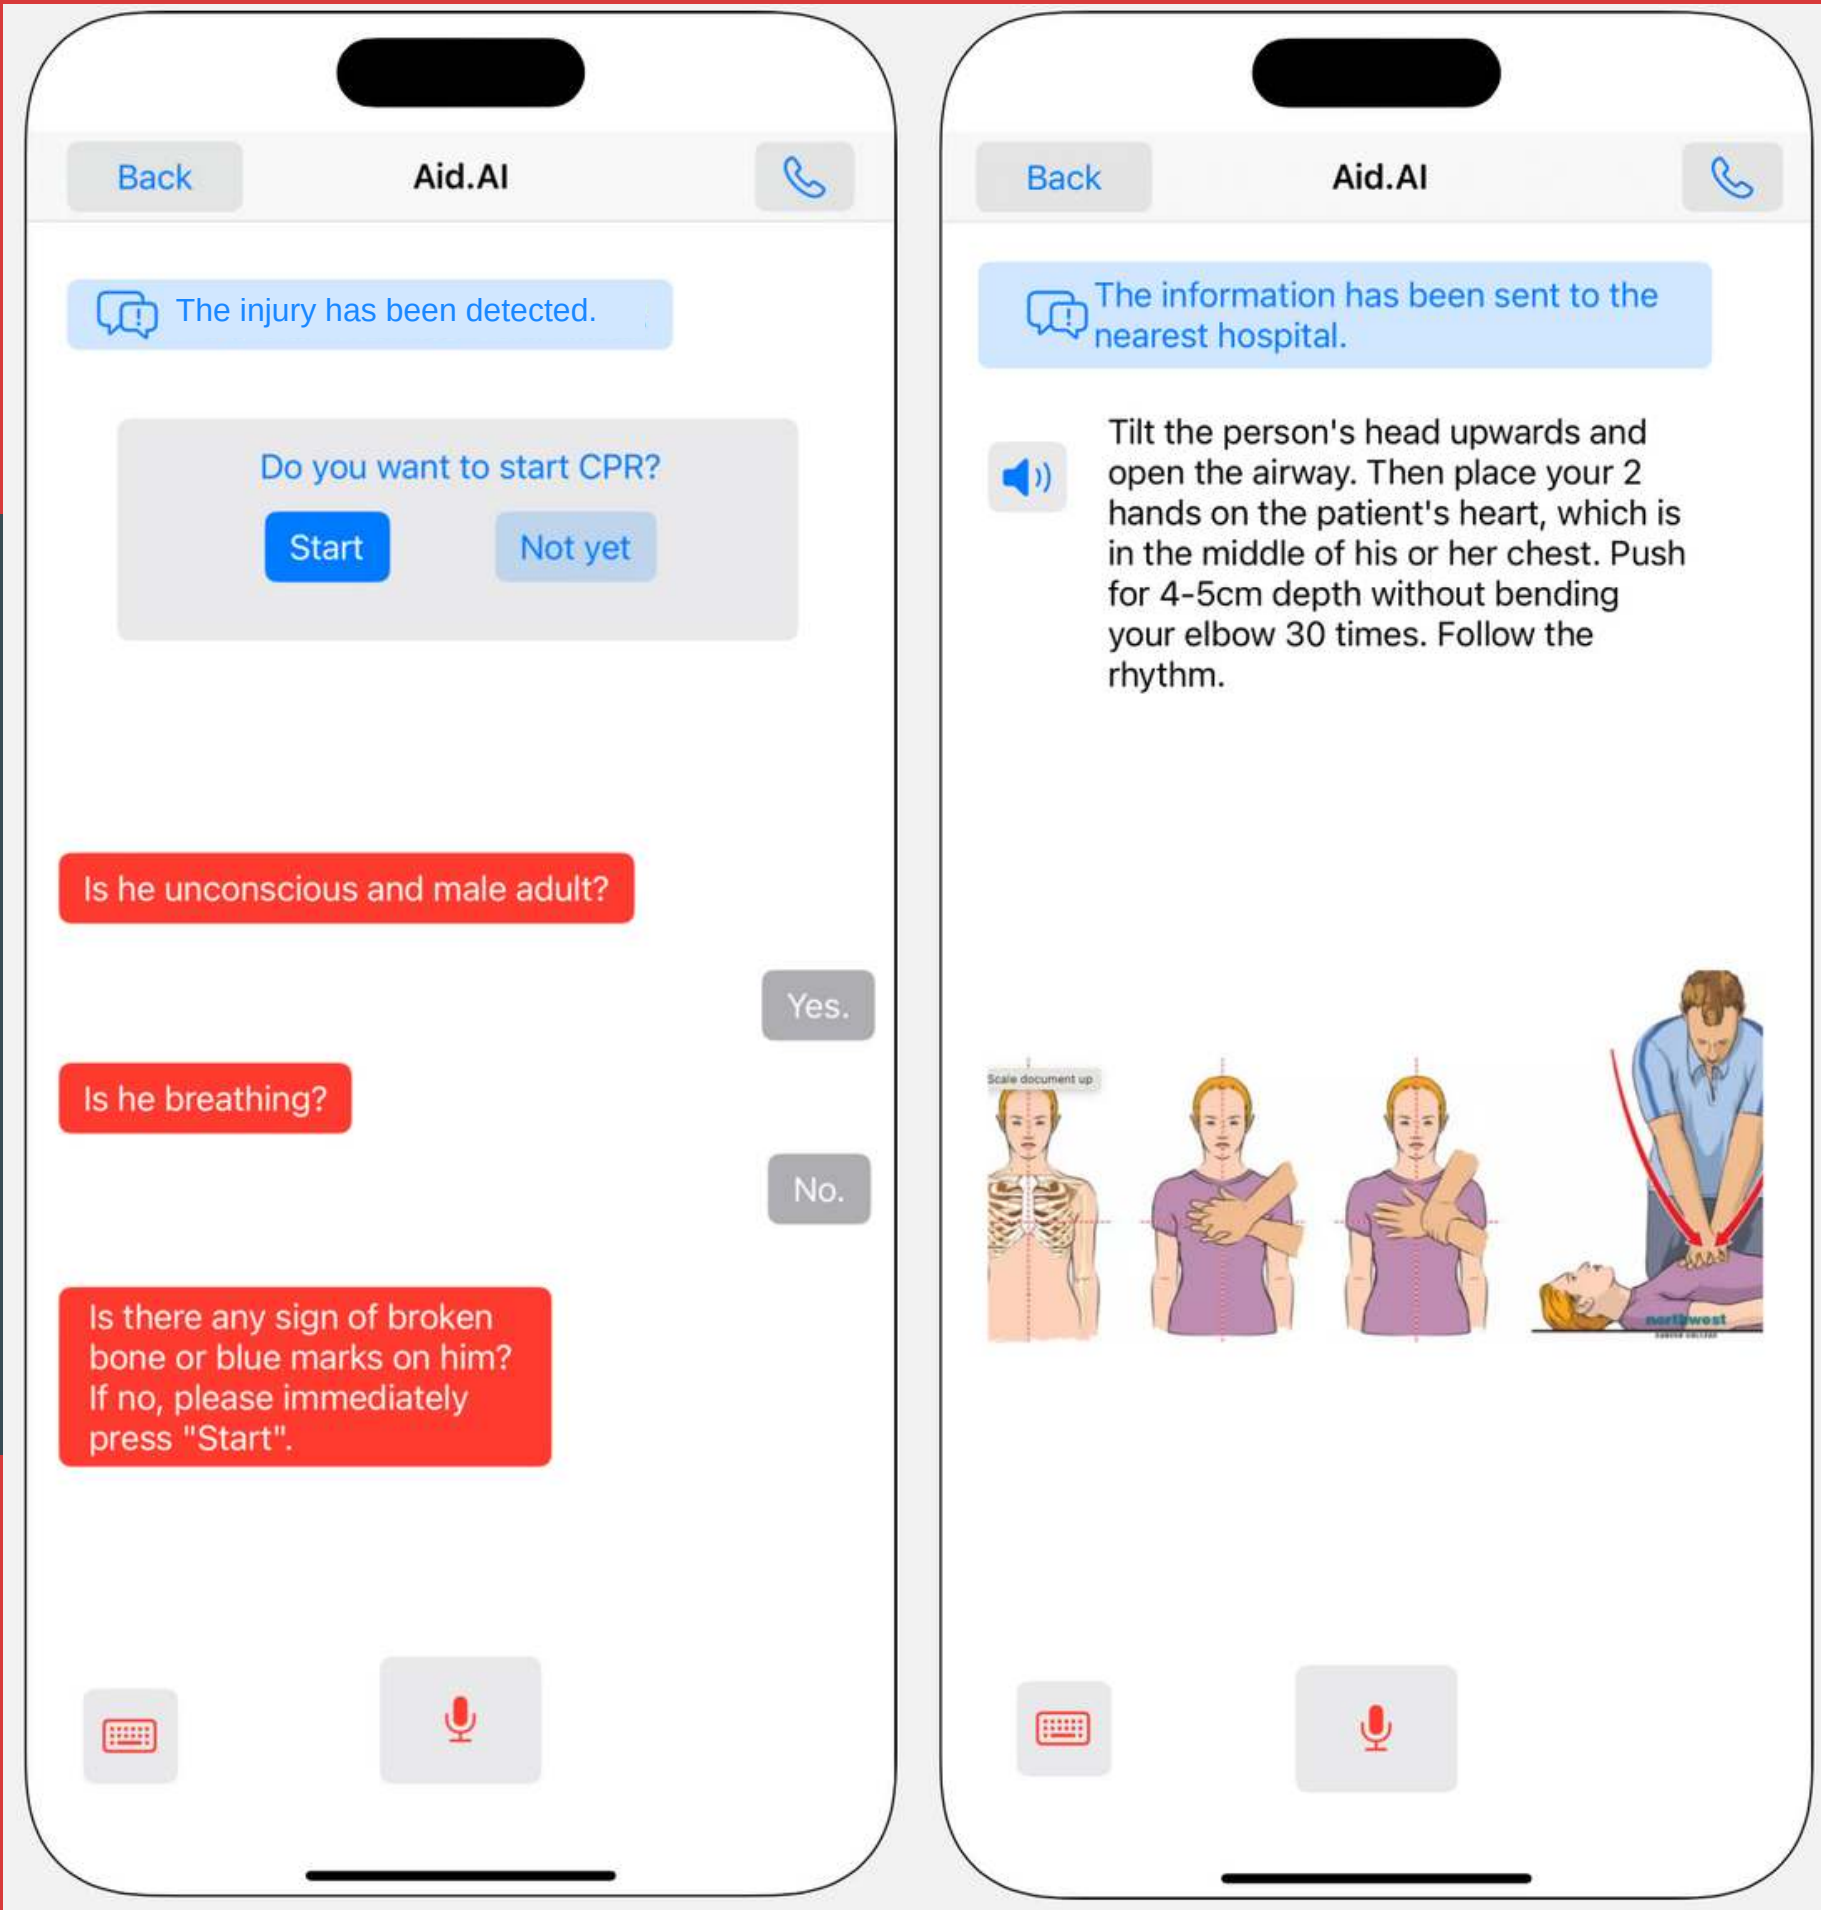

- Can't call emergency numbers abroad and in the countryside
- Dispatchers don't know the exact location
- Heavy traffic delays ambulances
- Don't know how to help and need detailed instruction on first aid. (images/video)
- Afraid of talking to the ambulance
- Mute people have difficulty to connect

Features of our application

- Image and voice recognition allows personalized questions and faster understanding
- Face identification and automatic information transfer to the nearest hospital/patient information are recognized
- Then you can choose to connect to an operator
- First aid instructions given paired with Generative AI for specific cases
- Inclusivity and Accessibility

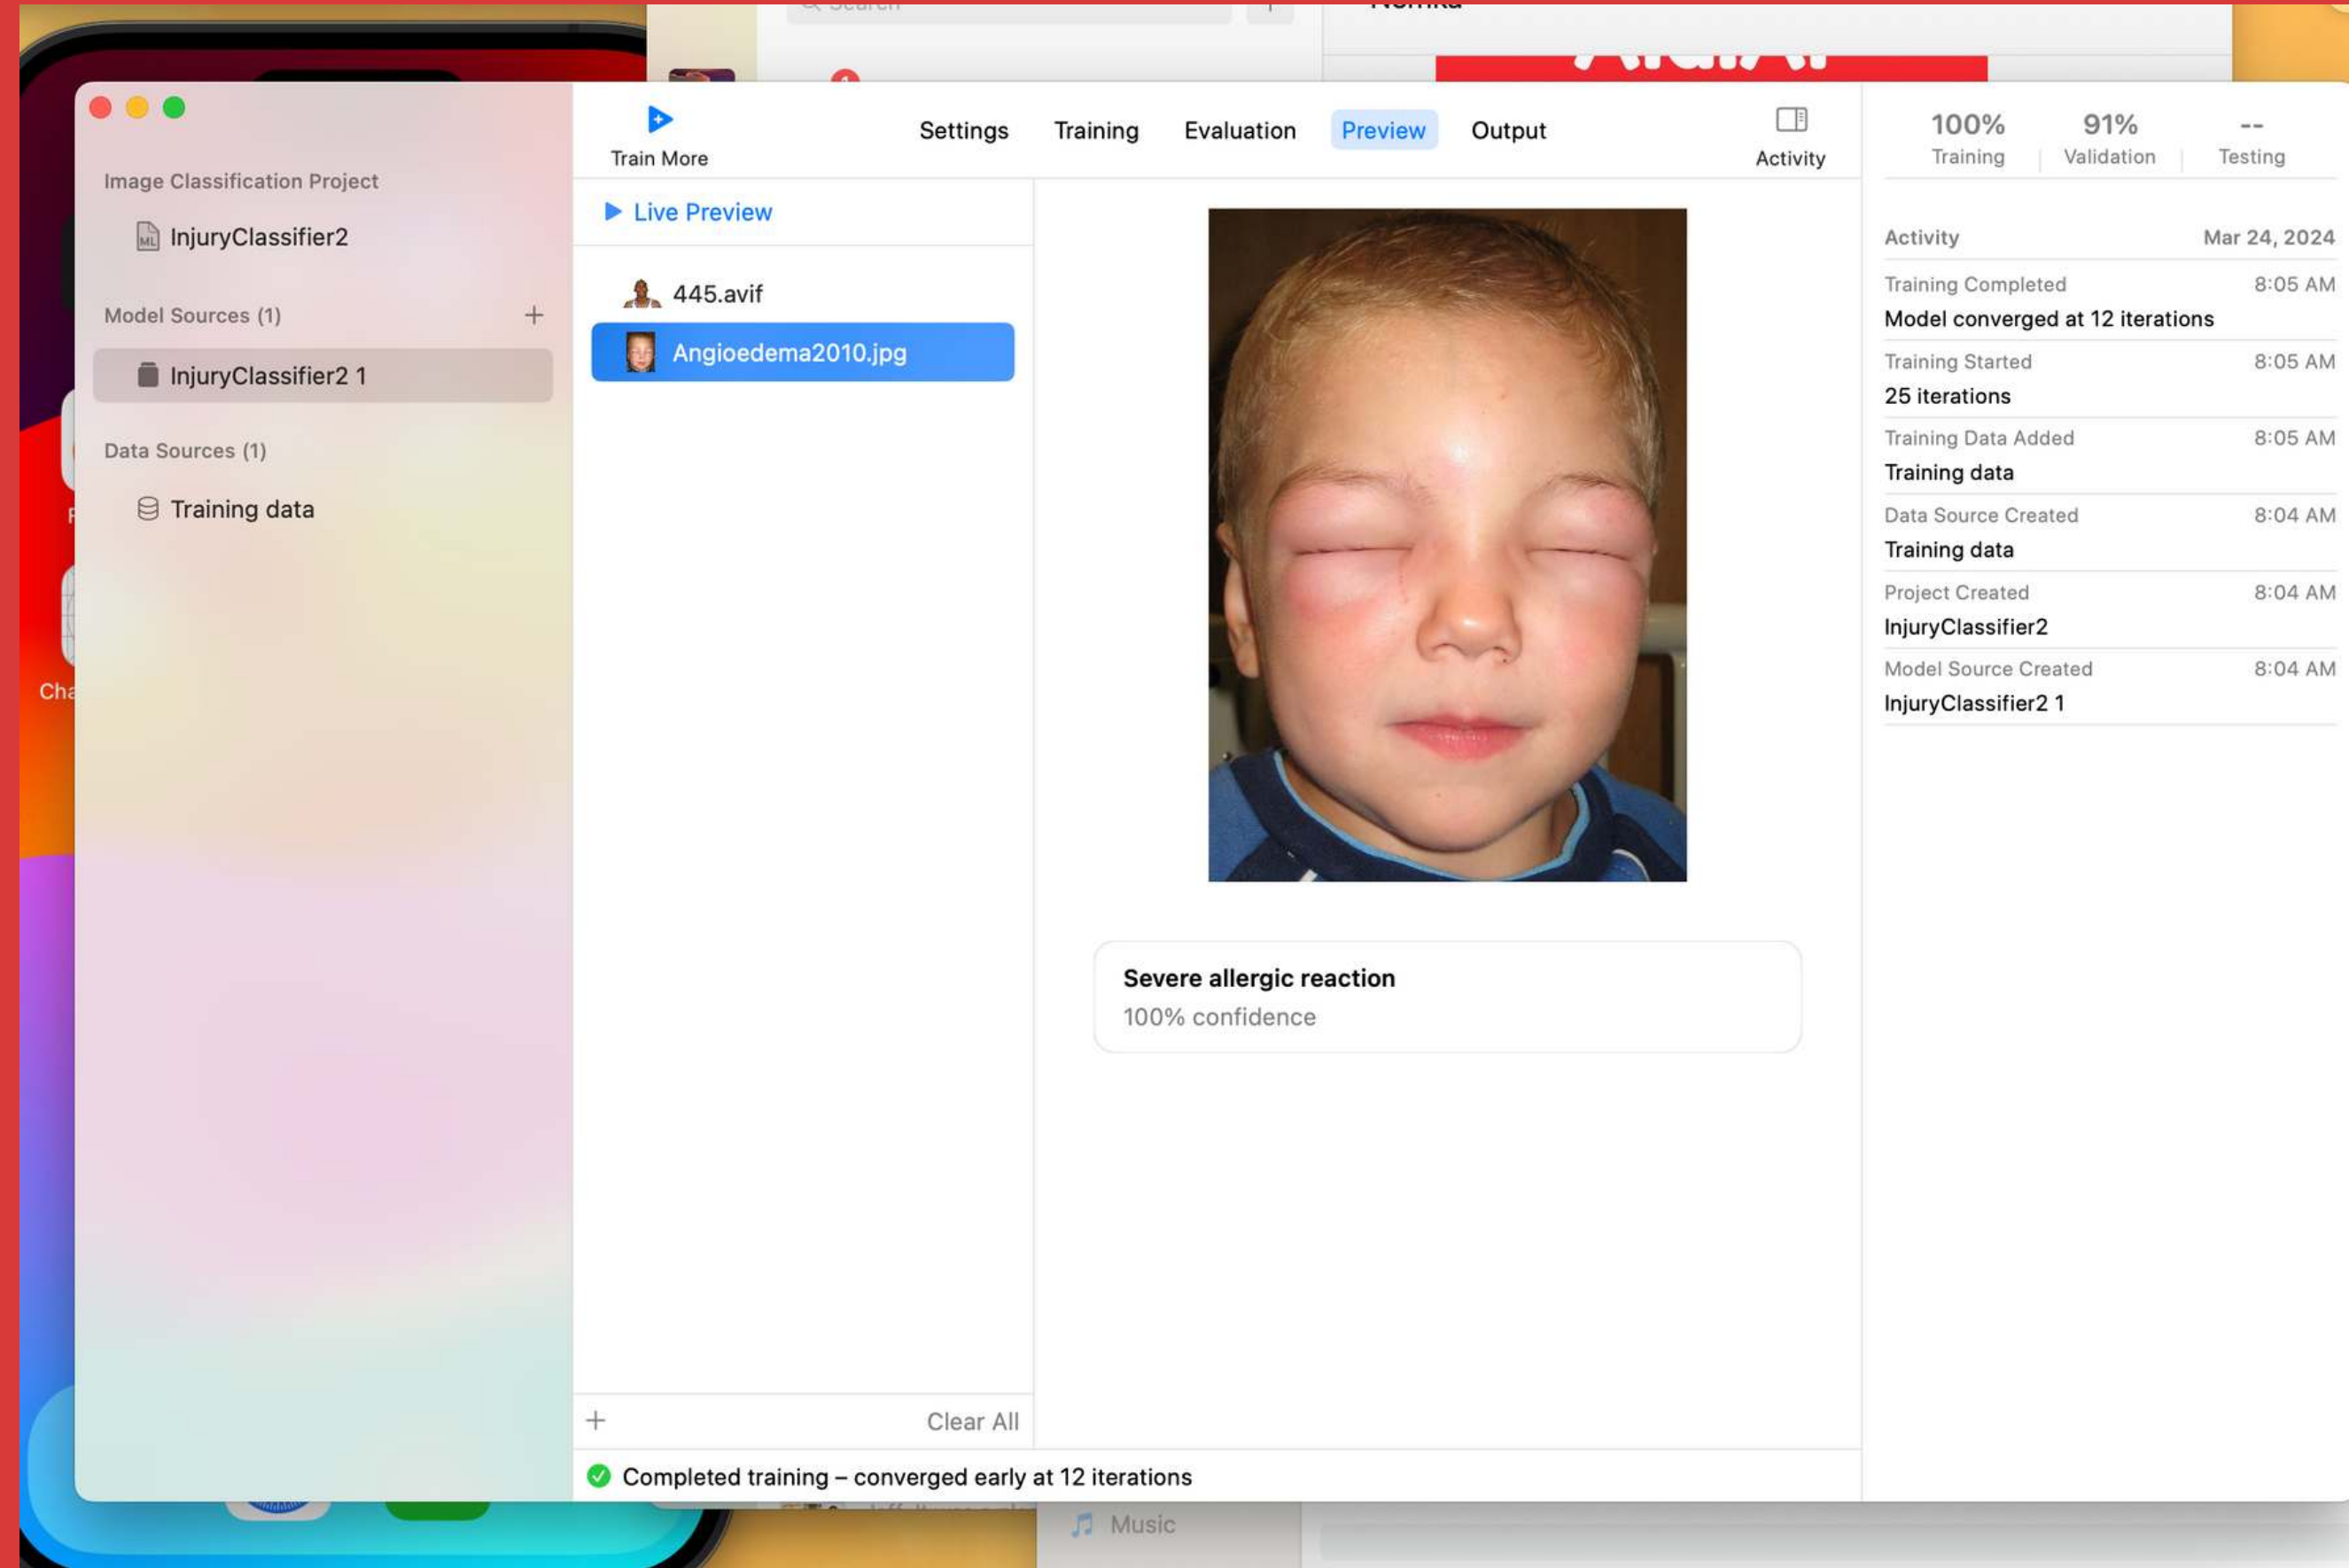

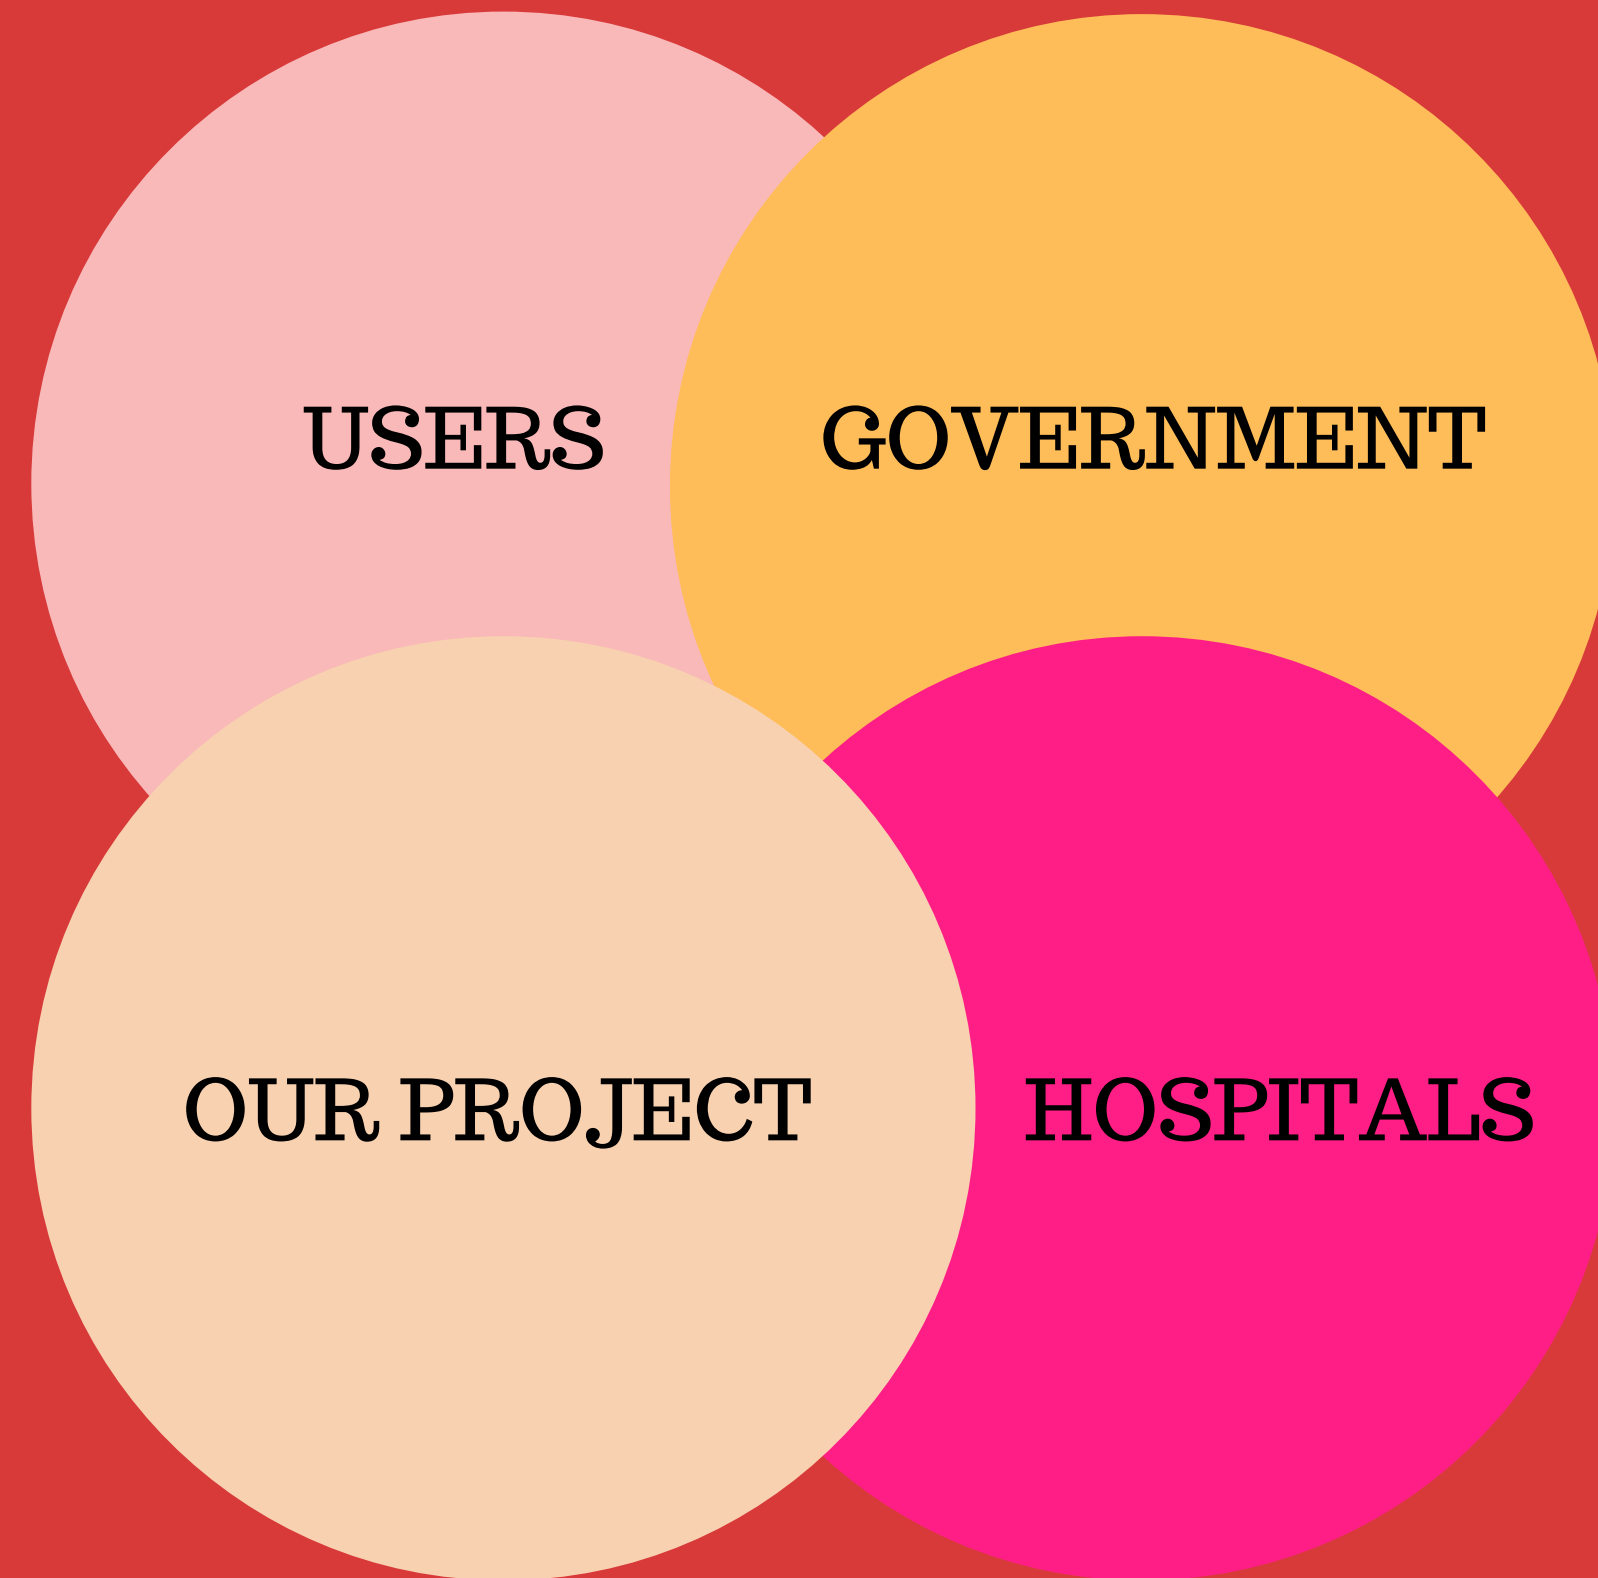

“Image Feature Print v2” Image classification model

Latest on-device visual recognition

- Highly accurate
- Training data set can be provided by hospitals
- Fast & portable
- Will be used in combination with on-device LLMs in the future

Benefits

The potential of our project:

- Currently no competitors
- To cooperate with international Govt's & NGOs
- Could make profit from an insurance company
- Could release first aid lessons and training sessions
- Give access to doctors and certified first aid givers to see the location of an injured person - could collect credits from it

Aid.Ai⁺

For those we could have saved...
