

Project Proposal

Chinese Radical Lab

“Radically Fun Chinese Character Learning”

PRESENTED BY TEAM “WISION”:
NEMUULEN TOGBAATAR
BILGUUN DUGARSUREN

2024/04/20

Product Overview

“An AI-powered gamified app that helps young learners emotionally bond with Chinese characters.”

15M

Estimated market size

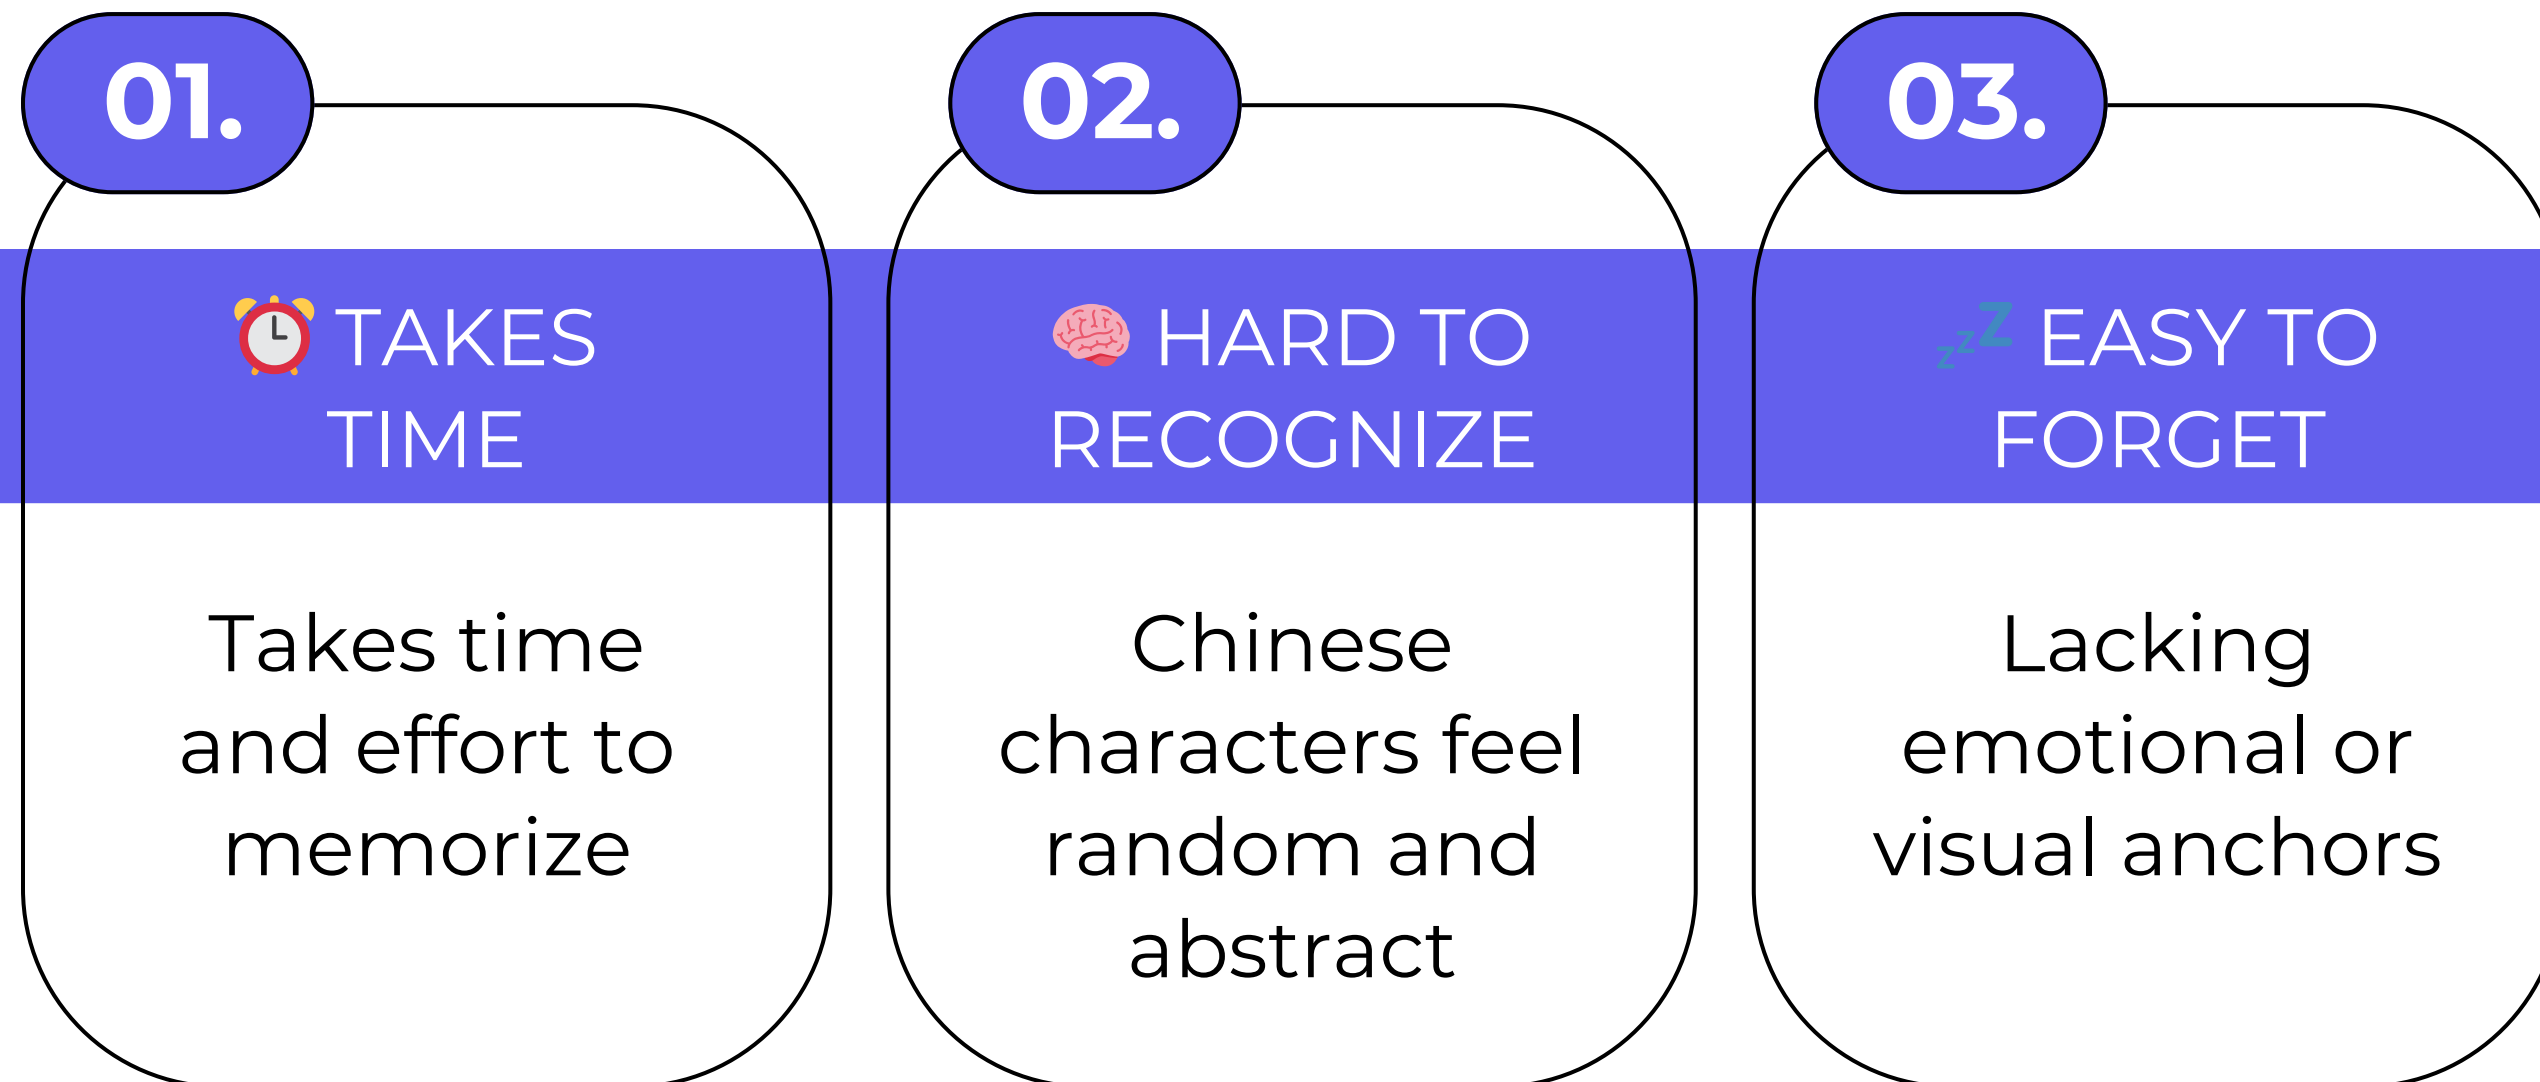

Who?

Young /age 10-25/ and tech-familiar Chinese language Learners

Why?

Most Chinese learners fall under this age group and they are more into gamified approach to learning, who have not already developed a way to memorize new things.

Challenges faced by our target market: “Memorizing characters” →

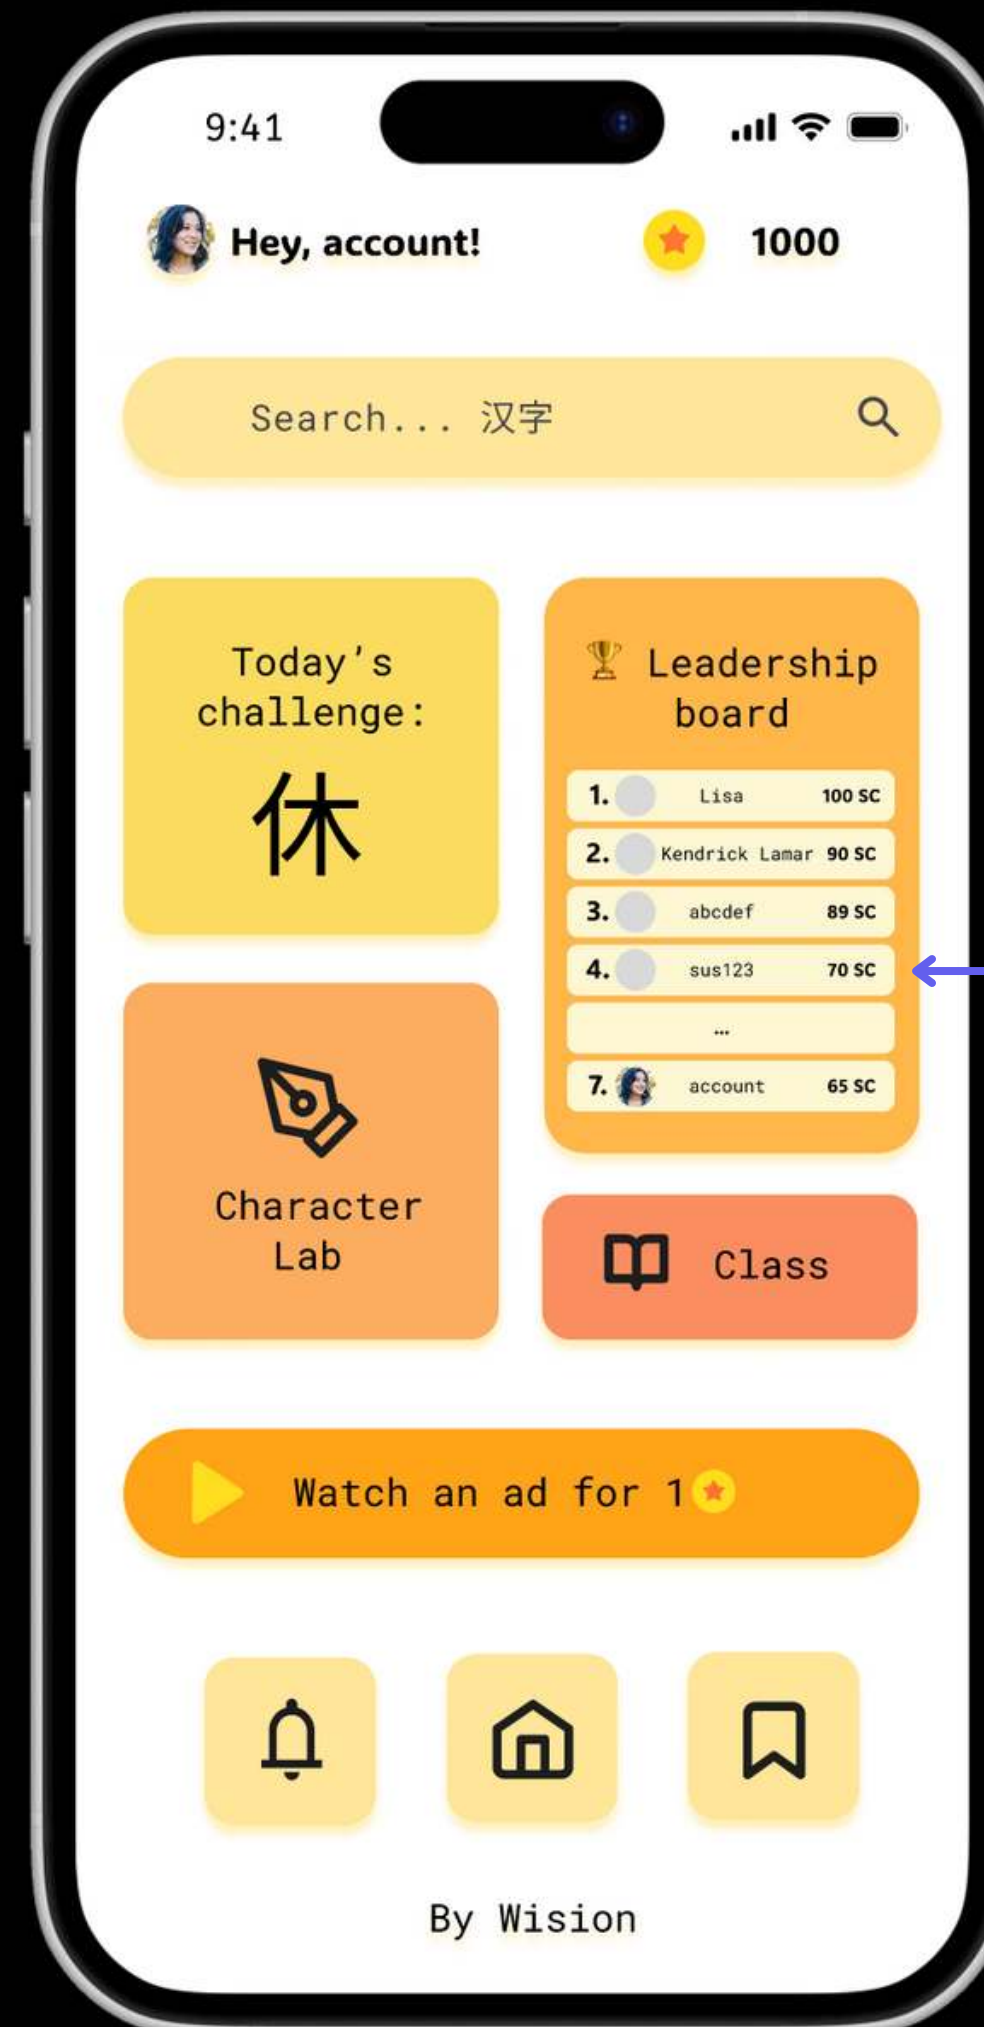

AN INTERESTING FACT: Despite often mentioning them [characters] as the most challenging part of learning Chinese, they also described them as the factor that makes learning Chinese interesting.

Competitive Advantage

PERSONALIZED LEARNING

Our app adapts to individual learning styles and interests, unlike fixed curricula of competitors.

CREATIVE ENGAGEMENT

Users actively create and experiment freely with characters and play games, fostering deeper connections and memory retention.

SUPPLEMENTARY TOOL

Learning enhancement, not replacement.

CREATE YOUR DICTIONARY

Saves and classifies their characters with their notes, and also tests users based on games and flashcard methods.

Direct Competitor Analysis

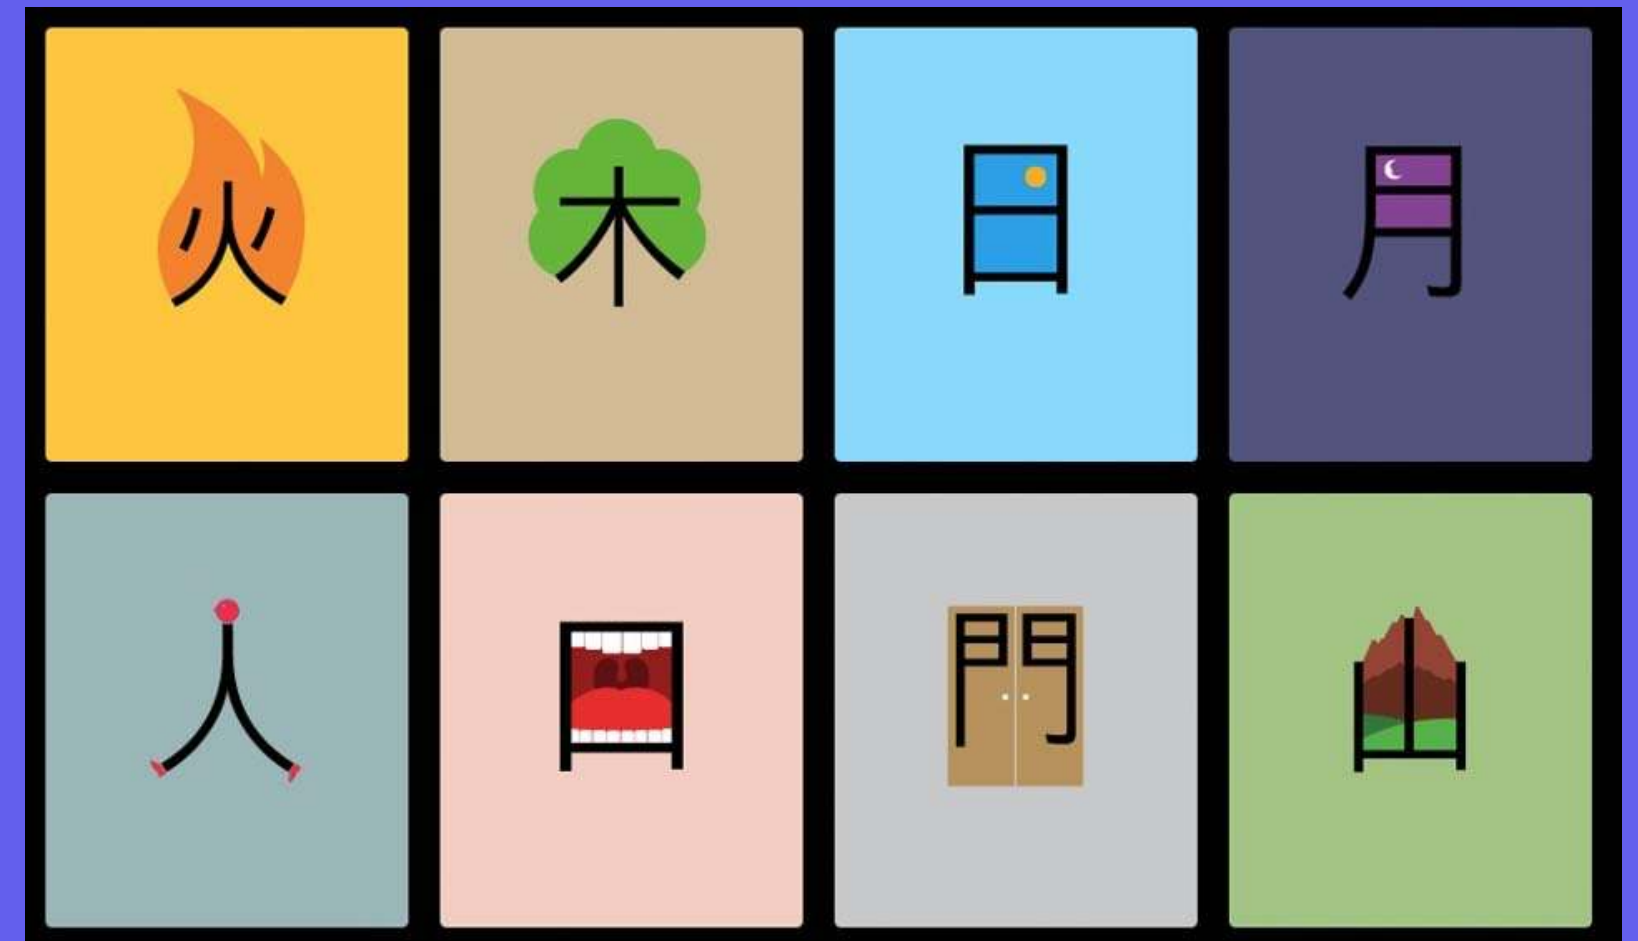

1. Chineasy

STRENGTHS

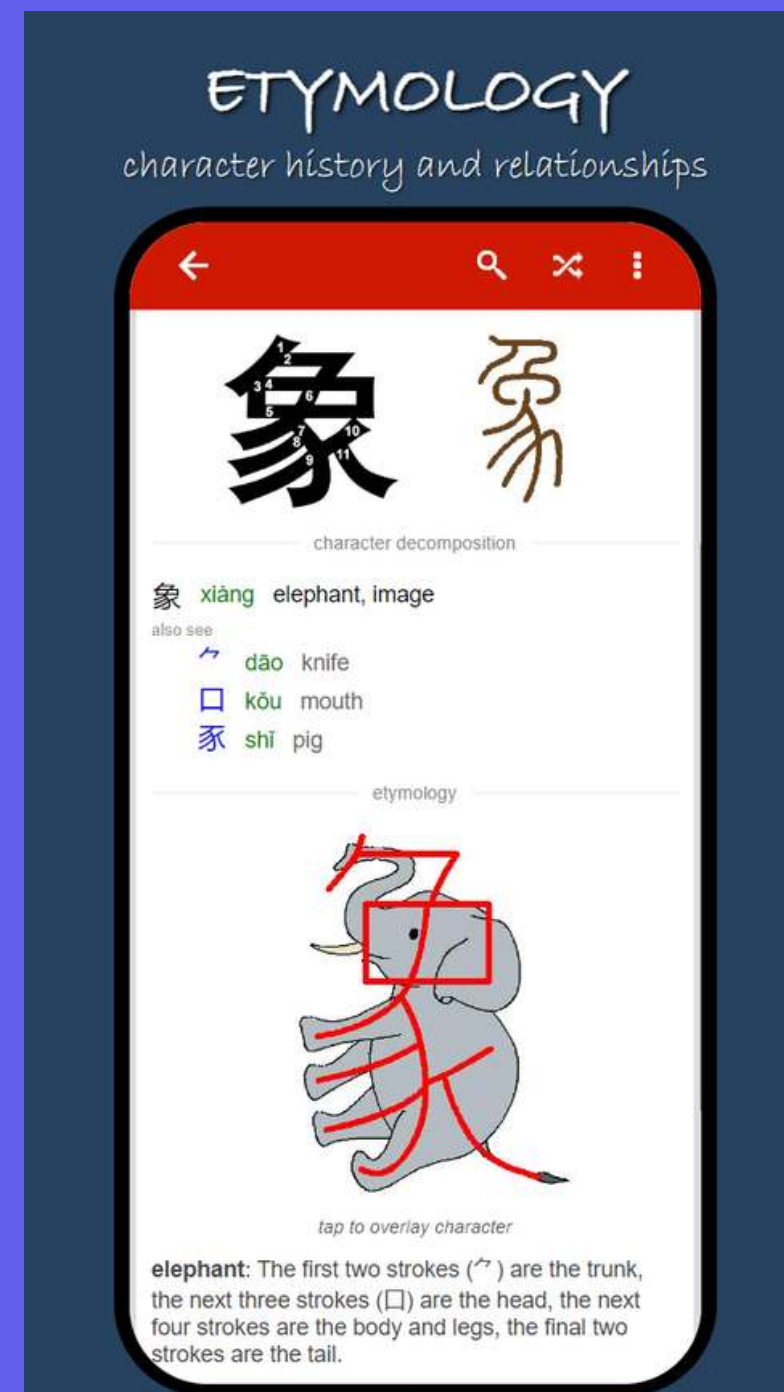

- A strong brand with visual appeal
- Great for beginners who are visual learners
- Structured curriculum with print & app versions

WEAKNESSES

- Passive consumption (not interactive)
- Limited character set
- No personalization or adaptation /predetermined steps/

Direct Competitor Analysis →

2. Chinese Deciphered

STRENGTHS

- In-depth explanations of character roots and logic
- Good for self-paced learners

WEAKNESSES

- Text-heavy and lacks gamification
- Limited character set/only HSK, only on Android/
- Does not have complex characters

Indirect Competitor Analysis →

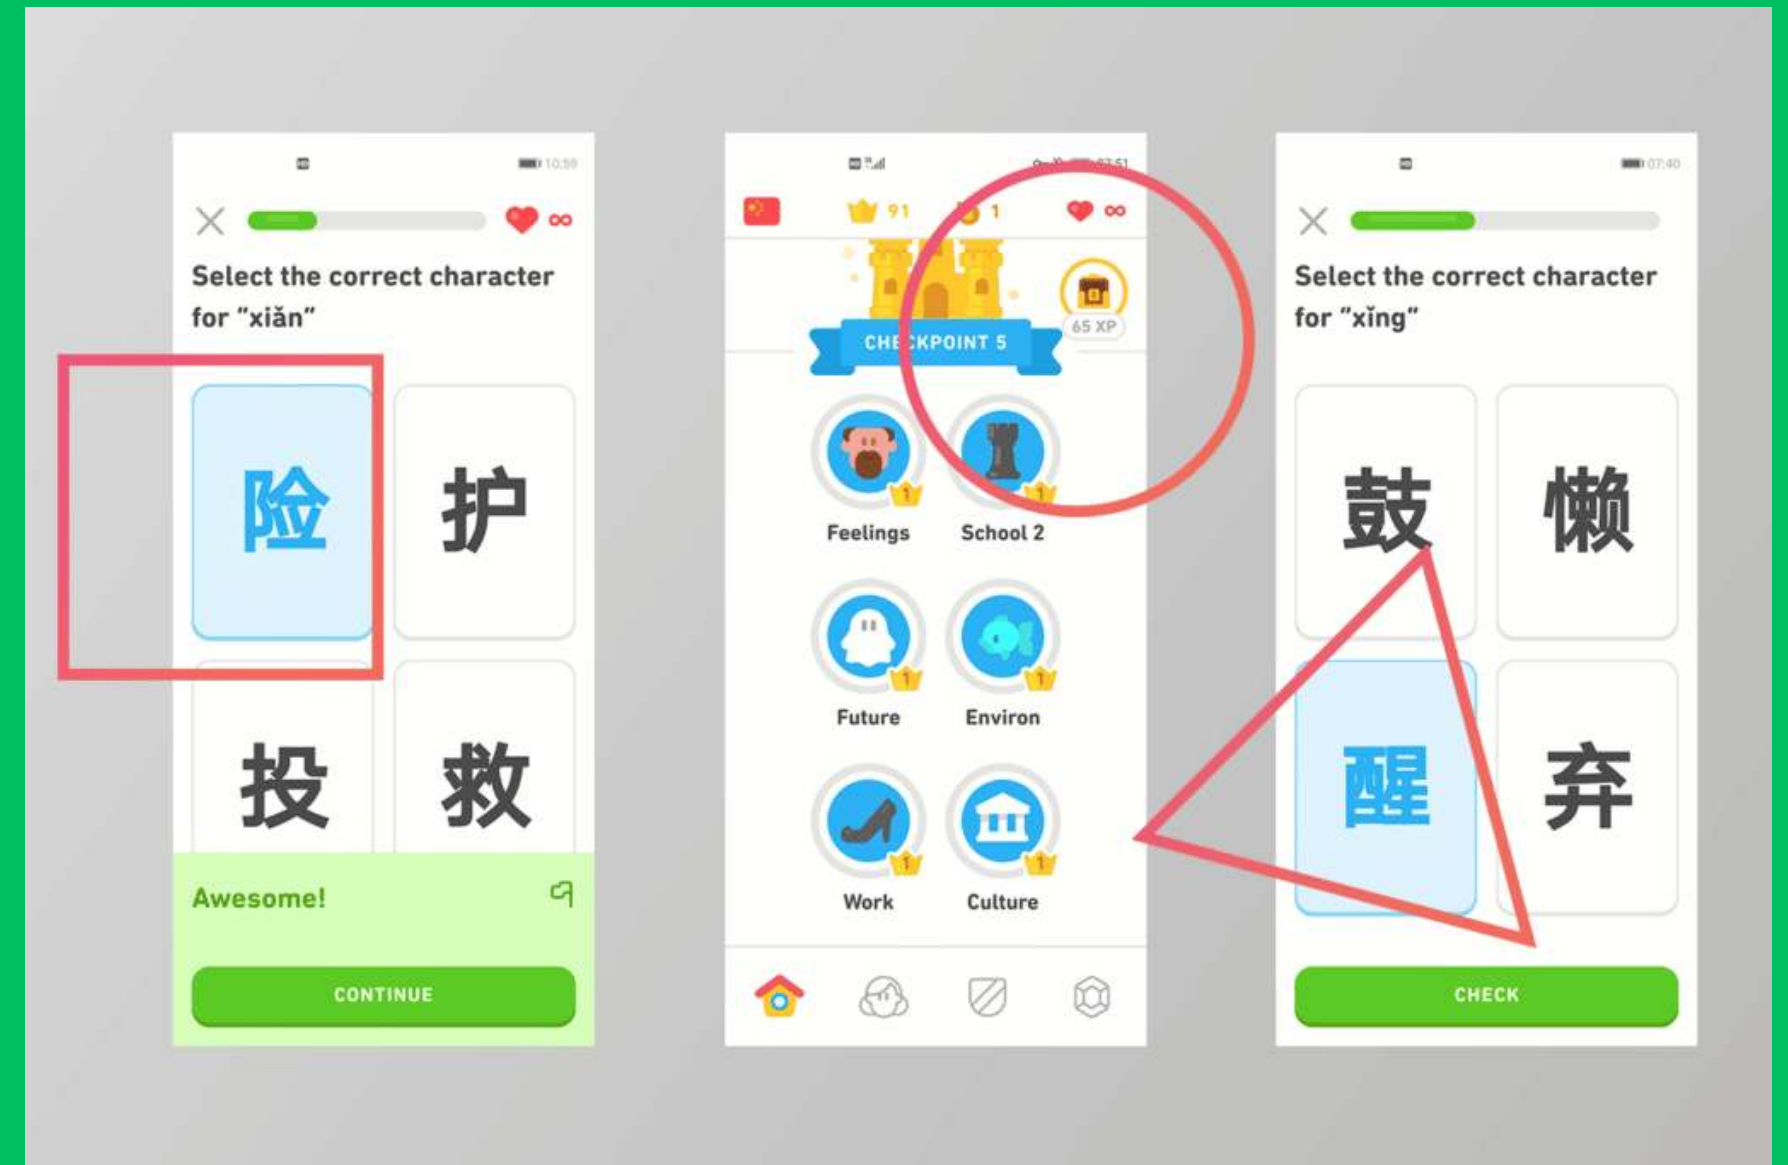

1. Duolingo

STRENGTHS

- Massive user base and visibility
- Fun, easy-to-use interface
- Regular rewards and daily streaks

WEAKNESSES

- Shallow character understanding
- Lacks cultural depth and visual radical breakdowns
- Very limited, and preset steps

Why We're Different

01

**We are more
than just a
mere
dictionary.**

02

**We allow our
user to be
creative and at
their own
pace.**

03

**We are class
friendly and
creating a
competitive
environment.**

04

**We are
creating a
limitless
possibilities,
not bounded by
labor.**

SWOT Analysis

Strengths

- Engaging Gamified Platform
- AI-Powered Storytelling
- Strong Market Fit
- Highly flexible and Personalized
- Allows our user to be creative and at their own pace
- Not much labor force needed

S

W

Weaknesses

- Limited Brand Awareness
- Resource Constraints

Opportunities

- Growing Demand for Mandarin Learning
- Partnerships with Schools and Universities
- Can be further developed into Japanese language

O

T

Threats

- Intense Competition
- Technological Shifts

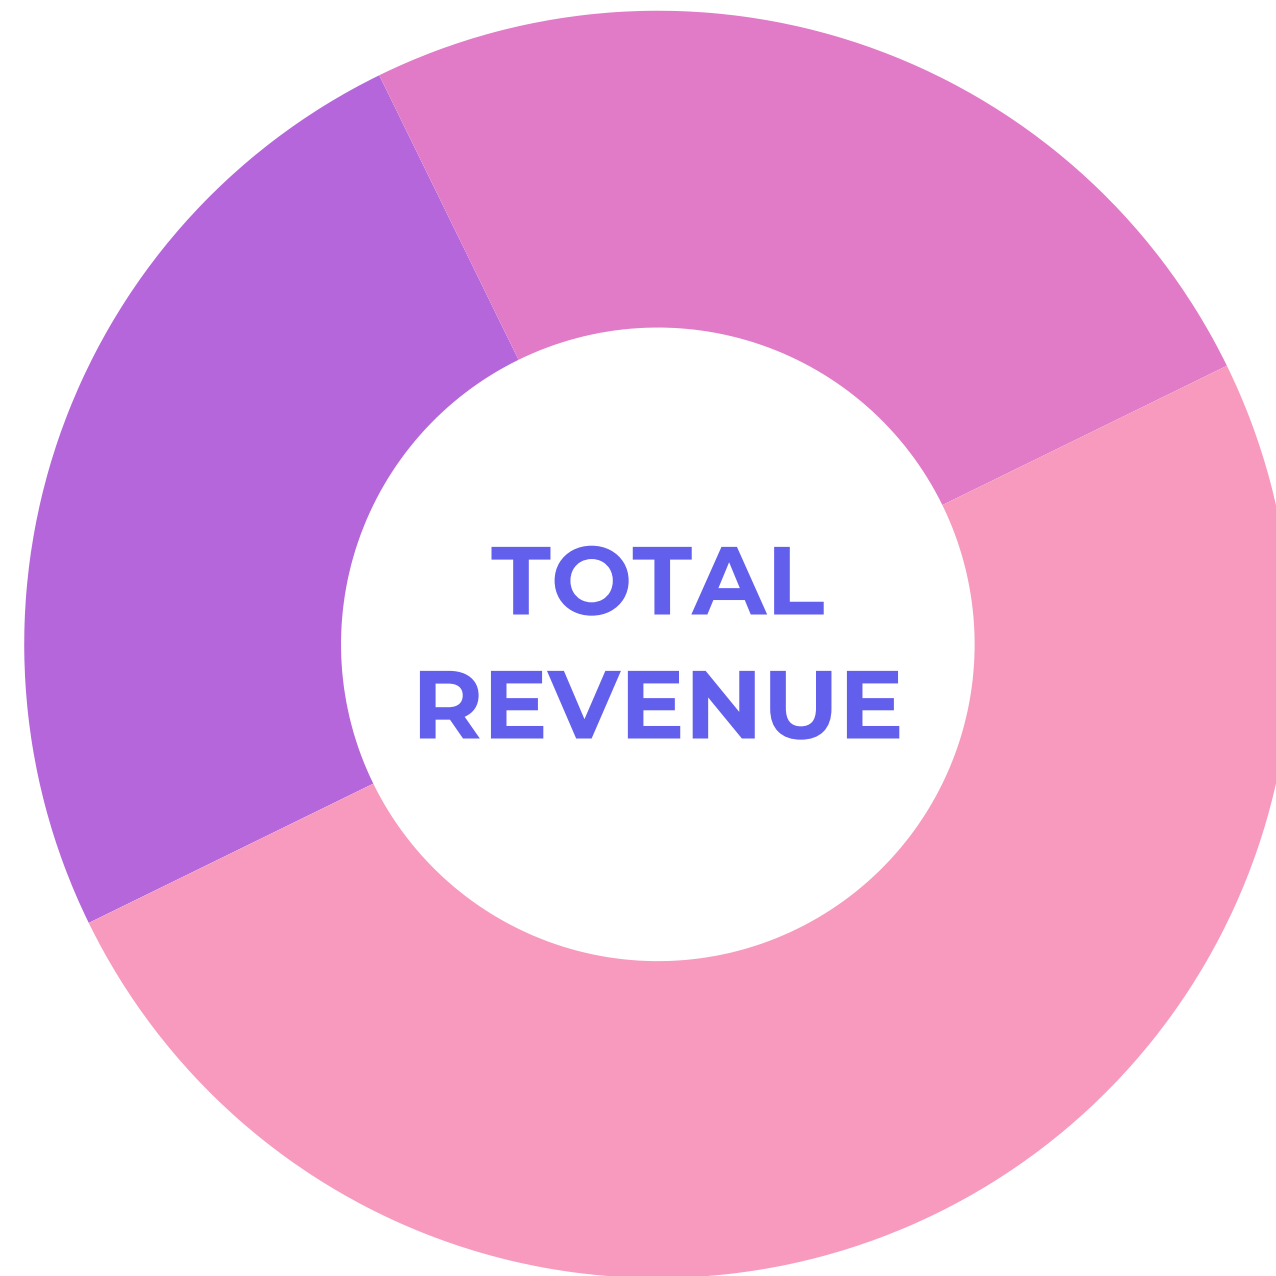

Business model: Freemium SaaS

Freemium model

How does your competition market their products or services? What can you improve?

Ads

How does your competition market their products or services? What can you improve?

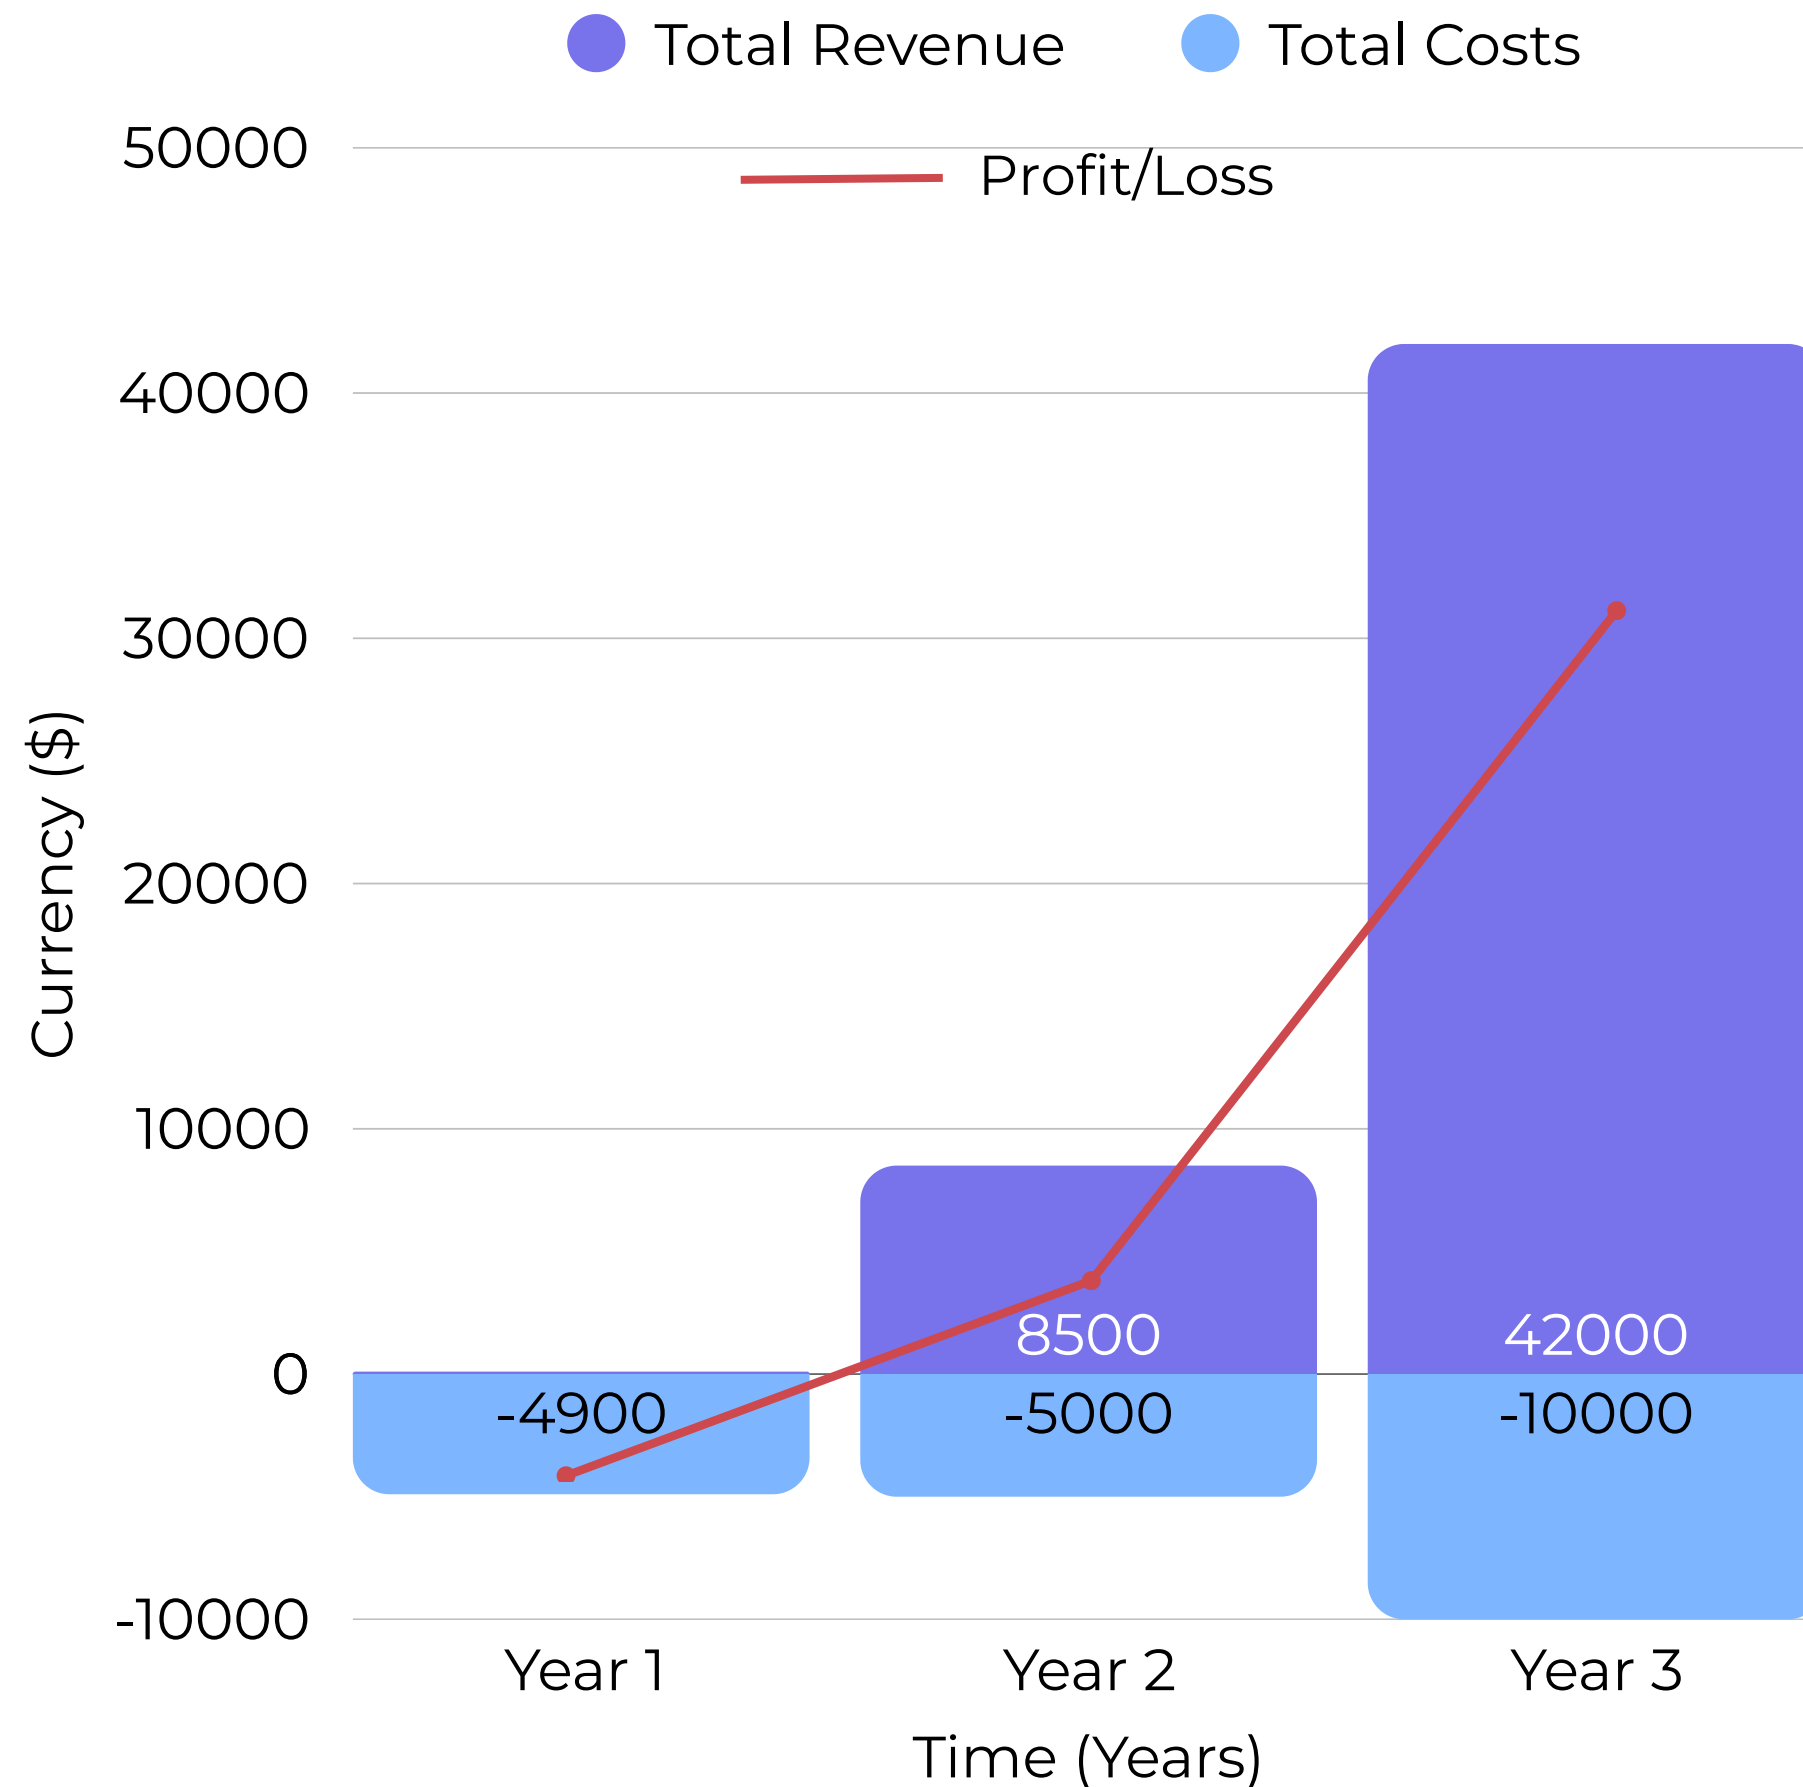

Token based AI use

How does your competition market their products or services? What can you improve?

Institutions

How does your competition market their products or services? What can you improve?

Financial Projections

2% **5%** **2**

Aiming to reach Paying users break-even (year)

- 200 tokens for \$4.99
- 500 tokens for \$8.99
- Student unlimited access \$7.99/ 6mo

Action Plan

Month 1-2

Market Validation & User Research by taking surveys, interviews, and doing basic UI design and recruiting beta testers

01

Month 8-9

Finalize Certifications and Compliance, Legal vetting, certifications for app stores

03

Month 12

Official release in app stores

05

02

Month 2-8

Product Development
Phase 1: Prototype Build, Define MVP features, initial app build

04

Month 9-12

Soft Launch: Contact universities and make agreements, Get feedbacks and make improvements at the same time

Total Development Costs: 35,000 RMB		
Cost category	Budget	Description
MVP DEVELOPMENT	15'000 RMB	Leverage open-source UI component libraries (NativeBase, React Native Elements)Utilize Firebase for backend/database needs
AI INTEGRATION	15'000 RMB	Bubble's Starter Plan (\$29) + OpenAI's GPT-3.5 API (\$10-\$50) = Around \$50/month for an MVP.
DESIGN IMPLEMENTATION	5'000 RMB	Use Canva Pro for marketing materials (\$119.99/year)2. Graphic design for radicals made by a digital artist

Broader benefits:

- **Encouraging** more Chinese language learners
- **Reduces dropout rates** and empowers young learners through creative tools
- **Encourages visual thinking**, storytelling, and emotional learning
- **Inspires lifelong learning habits** and curiosity through gamification
- Contributes to **AI-for-good** initiatives in education
- Freemium - **accessible education**

Future possibilities:

- Expansion into **Japanese Kanji**
- Voice or video **interaction** with AI tutors
- User-generated character story galleries and **sharing network**
- **Customizable curriculum** paths for teachers and institutions
- Localize content for **non-English speakers** (Spanish, Arabic, Hindi, etc.)

WISION

Thank You!

- 🧠 We lived the struggle of memorizing characters
- 💡 We designed the solution we wished existed
- 💪 With passion + tech + creativity, we're building something unforgettable
